Nguyen Vinh Khang

AI ENGINEER INTERN

(+84) 915464624 nguyenkhang2643@gmail.com DISTRICT 2, THU DUC CITY

https://www.linkedin.com/in/nguyenkhang26 https://github.com/NVkhang26/University-project

SUMMARY

AI Engineering student with project experience in Computer Vision and Deep Learning through academic and teammate projects, including building and applying models for real-world applications. Has basic skills in data preprocessing and model development.

EDUCATION

FPT University 2021 - 2026

Bachelor of Engineering in Artificial Intelligence

GPA: 7.44/10

HONORS AND AWARDS

Academic achievement: Awarded the title of Best Student of the Semester (Semester 5) 8/2024

PROFESSIONAL EXPERIENCE

FPT SOFTWAVE 9/2024 - 12/2024

Intern Developer

- Developed a basic educational webite application, focusing on core features and user interface.
- Collaborated with team members to design, implement, and test functionalities.
- Applied fundamental web development technologies and followed standard development workflows.
- Collaborated using Git and standard development workflows.

CERTIFICATIONS

Data Analysis with R 06/19/2024
https://www.coursera.org/account/accomplishments/verify/XQAVL77G3SPM

Python for Data Science, AI & Development 09/27/2023
https://www.coursera.org/account/accomplishments/verify/N3T2ZR33GTK8

Databases and SQL for Data Science with Python 09/26/2023
https://www.coursera.org/account/accomplishments/verify/2FMEPCTX55FA

TECHNICAL SKILLS

Programming Languages :	Python, SQL
Frameworks :	PyTorch, TensorFlow
Libraries :	NumPy, Pandas, OpenCV, Scikit-learn, MediaPipe
Databases :	MySQL, MongoDB
Core Skills :	Deep Learning, Computer Vision, Data Preprocessing

Soft skills:

- Problem-solving
- Teamwork
- Communication (Basic English)

UNIVERSITY PROJECTS

Vietnamese Sign Language Recognition System 1/2025 - 6/2025

Coder

Number of members: 4

Project description:

- Developed an AI-based system to recognize Vietnamese sign language alphabets using computer vision and deep learning techniques.
- Built a full pipeline including data collection, preprocessing, hand detection, feature extraction, model training, and real-time inference.
- Utilized MediaPipe to extract 21 hand keypoints and applied RNN-based models to capture sequential gesture patterns.
- Constructed and trained a custom dataset.
- Implemented real-time recognition and converted predicted hand gestures into corresponding text outputs.

Technology description:

- Computer Vision, Deep Learning
- MediaPipe (Hand Landmark Detection – 21 keypoints)
- RNN (Sequential Gesture Recognition)
- Python, TensorFlow
- Real-time processing, dataset building & model training

Applying AI in detecting the falling behavior of elderly people in nursing homes 9/2025 - 1/2026

Coder

Number of members: 4

Project description:

- Developed an end-to-end AI-powered surveillance system for real-time elderly fall detection using computer vision and deep learning.
- Built a real-time inference pipeline integrating YOLO Pose for human pose estimation and ST-GCN for skeleton-based action recognition.
- Designed and developed a full-stack web application using React.js, Node.js, and MongoDB.
- Implemented user authentication, camera management, supervisor management, and a real-time monitoring dashboard.
- Integrated WebSocket for live detection visualization and instant fall alerts, with email notifications sent to assigned supervisors.
- Collaborated with a four-member team to develop, integrate, and deploy the complete AI surveillance platform.

Technology description:

Frontend

- React.js

Backend

- Node.js
- MongoDB
- REST API
- WebSocket

AI

- Python
- PyTorch
- YOLO Pose
- ST-GCN

Others

- Real-time Video Streaming
- Email Notification
- Git
