

Bui Van Quang

Backend Developer Intern

☎+84 364 256 550 • ✉ quangvanbui2004@gmail.com • 🌐 [quangbv22810310162](https://github.com/quangbv22810310162)

Summary

Final-year Information Technology student with hands-on experience in backend development. Skilled in building RESTful APIs, implementing JWT-based authentication, and working with MySQL. Seeking a Backend Intern position to further develop practical engineering skills.

Education

Electric Power University

B.Sc. in Information Technology – Software Engineering

Oct 2022 – Present

GPA: 3.01/4.0 Expected Graduation: 2027

Key Projects

Web Shop – E-commerce Web Application

Jul 2025 – Nov 2025

A web-based e-commerce system that allows users to register, authenticate, browse products, place orders, and manage order history. The backend is responsible for business logic, data persistence, and secure communication with the frontend via RESTful APIs.

Team size: 3 Role: Team Leader & Backend Developer

- Designed and implemented RESTful APIs for an e-commerce system using Node.js and Express.js
- Implemented secure authentication and authorization using JWT
- Designed MySQL database schema and managed data using Sequelize ORM
- Integrated backend services with a React frontend via REST APIs

Achievement:

- Completed backend APIs covering authentication, product, and order modules
- Backend services successfully integrated and tested with frontend application

Tech: Node.js, Express.js, MySQL, Sequelize, JWT, REST API

Ocular Disease Recognition – Medical Image Classification

Aug 2025 – Nov 2025

Team size: 2 Role: Backend & Model Integration

A backend system that provides REST APIs for medical image classification. The system receives eye images from client applications, processes them using a trained deep learning model, and returns disease prediction results.

- Built backend APIs using Flask/FastAPI to serve medical image classification
- Integrated a deep learning model for image inference through REST endpoints
- Managed model loading and inference logic to ensure stable and efficient performance

Achievement:

- Built a backend service that accepts medical images and returns prediction results via REST APIs
- Successfully integrated a trained deep learning model into backend inference workflow
- Enabled client applications to consume AI prediction results through standardized API endpoints

Tech: Python, Flask/FastAPI, REST API, Deep Learning

GitHub: <https://github.com/quangbv22810310162/Ocular-Disease-Recognition>

Technical Skills

Programming: Java, JavaScript, Python

Backend: Node.js (Express), Spring MVC, RESTful API Design, MVC Architecture

Authentication: JWT, Session-based Authentication

Database: MySQL, Relational Database Design, SQL, Sequelize ORM

Containerization: Docker, Docker Compose

Frontend (Basic): React.js, HTML, CSS, Bootstrap

Tools: Git, Postman, Swagger (basic), VS Code
