Nguyen Thanh Khue

Backend Developer (.NET)

0948879690 olympia05042004@gmail.com Cau Giay, Ha Noi

OBJECTIVE

Software Engineering graduate from FPT University, oriented towards specializing as a Backend Developer (.NET). With practical experience from a management system project utilizing Clean Architecture, I am proficient in designing secure APIs and optimizing database performance. I am seeking an opportunity as a Fresher Backend Developer where I can apply my problem-solving mindset and Agile/Scrum methodologies to contribute direct technical value to the company's products.

EDUCATION

FPT University 2022 - 2026

Bachelor of Software Engineering

Major in Software Engineering

TECHNICAL SKILLS

Programming Languages:	C#, Java, JavaScript.
Backend Development:	ASP.NET Core, RESTful API design, JWT Authentication, Clean Architecture.
Frontend Development:	HTML, CSS, ReactJS.
Database Systems:	PostgreSQL, SQL Server, Relational Database Design.
Tools & Methods:	Git, GitHub, Postman, Hoppscotch, Swagger, Agile/Scrum.

PROJECT EXPERIENCE

Extra-Class Management System Jan 2026 - June 2026

Backend Developer & Team Lead

- Team size: 5 members.
- GitHub: BE (https://github.com/VCongNam/EMS-BE.git).| FE (https://github.com/VCongNam/EMS-FE.git).
- Demo: https://ecms-web.vercel.app/
- Tech Stack: ASP.NET Core, ReactJS, Supabase (PostgreSQL), Swagger, RESTful API - Developed backend APIs, database systems, and core business logic for Extra-Class Management System.
- Developed the backend for a modular extra-class management ecosystem utilizing ASP.NET Core and PostgreSQL, implementing Clean Architecture to strictly decouple business logic from external frameworks.
- Designed and implemented a custom OTP-based authentication service to ensure secure user identity verification, mitigating vulnerabilities associated with traditional token-based link exposure.
- Managed database interactions using strict entity-based repository patterns, enforcing data integrity and optimizing execution by avoiding unnecessary DTO overhead in internal queries.
- Optimized complex reporting queries to significantly reduce latency when retrieving class performance metrics, and documented API endpoints using Swagger to facilitate seamless frontend integration.
- Led a 5-member team following Agile/Scrum methodology, tracking sprint tasks to ensure consistent progress and the timely delivery of all project milestones.
