SUMMARY

Mobile Developer with hands-on experience developing cross-platform applications using **Flutter** and **React Native**. Experienced in building scalable mobile architectures with **MVVM**, **Clean Architecture**, **Provider**, and **BLoC**, while integrating **RESTful APIs**, **Firebase Services**, and AI-powered features. Successfully developed full-stack projects involving **Spring Boot**, **PostgreSQL**, **Google ML Kit OCR**, and **Gemini AI**. Passionate about creating maintainable, high-performance mobile applications that deliver excellent user experiences.

TECHNICAL SKILLS

Programming & Frameworks:	Dart (Flutter), Kotlin, Java, Javascript (React Js, React Native),TypeScript.
State Management:	Context API (React), Provider, Bloc (Flutter).
Database & ORM:	PostgreSQL, SQL Server.
Authentication & Security:	JWT,Firebase (Authentication,Firestore)
API, AI & Integrations:	RESTful APIs, Axios, Dio (Flutter), HTTP package, Firebase (Auth/Firestore), Gemini AI, Google ML Kit (OCR).
UI/UX & Tools:	Git/GitHub, Vercel, Postman, Figma to Code, Android Emulator
Language:	Vietnamese,English(Intermediate, TOEIC 700)

WORK EXPERIENCE

ECR Solutions Vietnam 1/2026 - 6/2026

MOBILE DEVELOPER INTERN

- Participated in the development and maintenance of enterprise-grade **Flutter Applications** for clients in **ERP**, **Logistics**, and **Business Management Systems**.
- Collaborated with **Backend Developers**, **UI/UX Designers**, **QA Engineers**, and **Project Managers** in an **Agile/Scrum Environment** to deliver client requirements.
- Converted complex **Figma Designs** into responsive and reusable Flutter widgets while maintaining UI consistency across multiple screen sizes.
- Integrated **RESTful APIs** using **Dio** and implemented robust error handling, authentication flows, and asynchronous data management.
- Applied **Provider** and **BLoC State Management** patterns to improve application scalability and maintain clean architecture principles.
- Participated in debugging, performance optimization, and feature enhancement for production-level applications.
- Worked with **Git/GitHub Workflow**, including branch management, pull requests, code reviews, and collaborative development practices.
- Contributed to the delivery of client projects by implementing new features, fixing bugs, and improving user experience across Android and iOS platforms.

Tech Stack: Flutter, Dart, Provider, BLoC, RESTful API, Dio, Git, Agile/Scrum, Firebase

PROJECT

AI LEARNING APP 3/2026 - 4/2026

Flutter & Full-stack Developer

A smart English learning application integrating AI for automatic exercise generation and Gamification systems.

Key Contributions

- Designed and built an end-to-end Client-Server architecture using **MVVM (Model-View-ViewModel)** and **Provider** for state management, deploying stable communication between the **Flutter App** and **Spring Boot Backend** via **RESTful API**.

- Structured the Flutter codebase following **Clean Architecture** (Data, Domain, Presentation layers), implementing the **Dio** client with custom interceptors and a sealed **Result** pattern for robust network exception handling.
- Integrated **Gemini AI** with a custom **3-tier lesson caching strategy** (User saved -> Template clone -> API generation) to minimize latency and API usage costs.
- Developed an OCR feature using **Google ML Kit** directly in Flutter, supporting on-device text recognition for **quick lookup**, reducing reliance on server-side processing.
- Optimized the learning experience with a **Spaced Repetition** algorithm in the "Vocabulary Garden", combining **SQLite** to store vocabulary, track memory levels, and support **offline lookup**.
- Built a **Gamification** layer including learning streaks, daily progress tracking, **experience points (XP)**, and a **Leaderboard** to increase user retention and engagement.

Tech Stack: Flutter, Java Spring Boot, PostgreSQL, SQLite, Firebase, Gemini AI, Google ML Kit.

---

PERSONAL FINANCE AI 3/2026 - 5/2026

Mobile Developer

A **cross-platform** personal finance management ecosystem comprising a **Mobile App** and a **Web Dashboard**, connected to a shared **Spring Boot Backend**, supporting income/expense tracking, statistics, and transaction reminders.

Key Contributions:

- **Designed a fullstack architecture** following a **multi-client model (Mobile + Web)** sharing a unified Backend API, ensuring seamless **financial data synchronization** across platforms.
- **Developed the Mobile application** using **React Native (Expo)**, building business flows (adding transactions, notifications) and implementing **file-based routing** using **expo-router**.
- **Built the Web Dashboard** using **React, Vite, and Tailwind CSS**, enabling **data visualization** for income/expenses and financial reports via **Recharts** to track spending trends.
- Built a supporting **Java Spring Boot Backend** (JPA, **PostgreSQL**) to serve RESTful APIs, ensuring seamless end-to-end data flow and stable **Frontend integration** via **Axios**.
- **Standardized the development environment setup** (dependency installation, local network API configuration for mobile, backend connection), facilitating **rapid onboarding** for new contributors.

Tech Stack: React Native (Expo), TypeScript, React (Vite), Tailwind CSS, Java Spring Boot, PostgreSQL, JPA, Axios, Recharts.
Github: https://github.com/khanhcrs/finace_ai.git

EDUCATION

Sai Gon University 2022 - 2026

Major: Bachelor of Information Technology
