📍 Bac Tu Liem, Ha Noi

ABOUT ME

A hands-on developer who loves turning AI concepts into functional applications through independent learning. I enjoy diving deep into new frameworks and figuring out how to seamlessly integrate AI tools into software systems. Eager to bring my fast-learning mindset and solid coding foundation to an AI Engineer Internship

PROJECTS

AI-POWERED INTERACTIVE ASSISTANT (VISION & LLM)

- Technologies: Python, PyTorch, MediaPipe, Hugging Face, FastAPI, RAG, SQLite
- Trained a custom neural network using PyTorch to classify complex hand gestures based on landmarks extracted via MediaPipe.
- Engineered a high-performance backend using FastAPI to process real-time gesture data and serve AI inference endpoints.
- Integrated a RAG pipeline leveraging Hugging Face Transformers to parse documents and generate context-aware responses.
- Preprocessed text datasets and structured them into SQLite/Vector databases to optimize query latency and QA accuracy.
- [Try it here](#)

AI-ENHANCED E-COMMERCE PLATFORM (LARAVEL & LLM)

- Technologies: PHP, Laravel, MySQL, LLM Integration, Data Ingestion, NLP
- Integrated an intelligent LLM-powered chatbot to assist users with natural language product discovery.
- Engineered a data ingestion pipeline to format MySQL database records into AI-readable context.
- Designed dynamic prompt workflows enabling the AI to accurately extract and recommend products from the database.
- Built a robust backend architecture using Laravel and RESTful APIs to reliably serve the AI-driven features.

SKILLS

TECHNICAL SKILLS

- Programming Languages: Python (OOP), PHP, SQL.
- AI & Deep Learning: PyTorch, Hugging Face (Transformers), Computer Vision (MediaPipe, OpenCV, YOLO, CNN).
- Applied AI & Data: RAG (Retrieval-Augmented Generation), Prompt Engineering, Data Preprocessing, Scikit-learn.
- Backend & Systems: FastAPI, Laravel Framework, RESTful APIs, SQLite, MySQL.
- Tools & Platforms: Git/GitHub, Streamlit, Postman.
- Languages: English (Good at communication and reading technical documentation).

SOFT SKILLS

- Problem-Solving: Proven ability to break down complex system requirements into manageable technical tasks.
- Self-Directed Learning: Highly adaptable and capable of independently researching and applying new AI frameworks to practical projects.
- Analytical Thinking: Strong capability in analyzing data structures and optimizing model inputs/outputs for real-time applications.
- Team Collaboration: Effective team player in technical environments, capable of actively communicating ideas and coordinating via version control (Git) to merge code seamlessly into unified systems.

EDUCATION

Information Technology

- Hanoi University of Natural Resources and Environment
- GPA 3.4/4
