WORK EXPERIENCE

FPT CORPORATION - TECHNOLOGY DIVISION

1/2026 - 4/2026

Python Intern - FPT Recruitment Project

- Support the development and testing of APIs that facilitate data processing workflows within the system.
- Participate in developing RESTful APIs using Python/FastAPI to connect data between the back-end and AI-integrated features.
- Learn how to organize source code, handle business logic, and manage data flow in real-world software projects.
- Leverage ChatGPT, Gemini, and GitHub Copilot to support document research, requirements analysis, and development process optimization.

EDUCATION

DAI NAM UNIVERSITY

Information Technology - GPA 3.0

- Database Design Competition - Third Prize.
- Back-End Program Design Competition – Consolation Prize.

SKILLS

- Understand and be able to use Python to develop AI-integrated systems that meet business requirements.
- Experienced in integrating LLMs/GenAI into chatbot systems via the OpenAI API.
- Understand and apply prompt engineering and context injection to incorporate dynamic data from the database.
- Knowledge of Deep Learning and basic Machine Learning.
- Capable of independently developing an AI-integrated web application.
- Experienced in building RESTful APIs using FastAPI and integrating chatbots, back-end systems, and PostgreSQL databases.
- Experienced in using AI tools such as Gemini, GitHub Copilot, and Codex to support research, programming, debugging, and workflow optimization.
- Able to use Git, GitHub, Docker, and the Ubuntu CLI to deploy a project to a server.
- Able to read and understand technical documents in English.

PERSONAL PROJECT

QTIK - MOVIE TICKETING SYSTEM

3/2026 - 6/2026

TECH USED: **REACT JS + FASTAPI + POSTGRESQL + OPENAI API + PAYOS**

Link Project: <https://www.qtik.io.vn>

Link GitHub: <https://github.com/vminhquan/fastapi-project.git>

KEY FEATURES

- Manage bookings, orders, and payment statuses.
- Manage dynamic seating charts for each screening.
- Develop systems for authentication, user authorization, and API protection.
- Integrate the OpenAI API to build an automated ticket-booking chatbot.
- Automated QR Webhook Payment

DETAILED SYSTEM DESCRIPTION

- Integrate the OpenAI API to build a GenAI virtual assistant that supports checking showtimes and seat availability, booking tickets, and processing payments.
- Design a Context Injection flow to feed dynamic data from PostgreSQL into the chatbot's conversation context.
- Prompt engineering is applied to optimize responses, helping the chatbot provide answers that closely align with the system's actual data.
- Develop an intermediary API using FastAPI to connect the chatbot to the database and ticket booking workflows.
- Integrate PayOS/VietQR payment webhooks to automatically update transaction statuses and facilitate ticket information lookup after payment.
- Implement HMAC signature verification to authenticate webhooks and secure transaction data.
- Develop a chatbot interface using ReactJS and integrate APIs to enable user interaction with the virtual assistant.
