NGUYỄN TÙNG KHÁNH

AI Engineer

0868042398 nguyenkhanhvp2004@gmail.com https://github.com/nguyenkhanhpro Hà Nội

CAREER OBJECTIVE

Passionate about Artificial Intelligence, Machine Learning, and Data Automation. Seeking an AI Engineer Internship opportunity to apply my skills in Python development, data processing, web scraping, and AI-driven automation. Interested in building intelligent systems, developing ETL pipelines, integrating AI APIs, and contributing to real-world AI solutions while continuously improving my technical and problem-solving skills.

WORK EXPERIENCE

Zinza Techlonogy April 2025 - July 2025

Intern trainning AI

Participated in Large Language Model (LLM) training and evaluation projects.
Designed and optimized prompts across multiple task categories:

- Code Generation
- Code Refactoring
- Problem Reflection
- Test Reasoning
- Instruction Following

Created high-quality prompt-response pairs for AI training datasets.
Evaluated model outputs using detailed quality criteria, including:

- Correctness
- Logical reasoning
- Code quality
- Instruction adherence
- Completeness
- Safety and reliability

Identified hallucinations, reasoning errors, formatting issues, and inaccurate outputs generated by AI models.
Assigned evaluation scores and provided detailed feedback to improve model performance.
Evaluated model responses according to project guidelines and quality standards.
Collaborated with project teams to improve prompt effectiveness and response quality.

Teky Academy – Programming Instructor *September 2024* - Present

Part-time Lecturer

- Teaching Programming for Kids aged 4 to 16
- Conducted programming exam preparation courses (HKIKO) for students, helping them improve problem-solving and coding skills.
- Developed lesson plans, exercises, and assessment materials tailored to students' skill levels.

PROJECTS

GitHub : https://github.com/nguyenkhanhpro/NLP_Legal.git April 2026 - Present
Google Colab : https://colab.research.google.com/drive/15esHzy5dIEopbKVpV_VfFnGhkEp2Su_Q?usp=sharing
Report : https://www.overleaf.com/read/gybvpptmtkjt#2d9eb8

NLP Legal Question Classification & Retrieval System

Technologies: Requests, Selenium, BeautifulSoup, Pandas, Scikit-learn, PyTorch, FastText, Bi-LSTM, Git.

- Data Crawling & Automation Pipeline:
  - Designed and implemented automated web crawlers using Selenium, BeautifulSoup, and Requests to collect a dataset of 5,000+ legal QA pairs from multiple dynamic sources (*LuatVietnam, ThuVienPhapLuat*, etc.).
- ETL & Data Processing:
  - Engineered an ETL pipeline using Pandas to clean, preprocess, and transform unstructured scraped text into highly normalized formats.
  - Efficiently managed, structured, and stored the processed dataset into optimized flat files (CSV), ensuring data readiness for model training.
- AI Models & Information Retrieval:
  - Developed and compared multiple NLP classification models (Logistic Regression, Bi-LSTM + FastText) and designed a hybrid ensemble model, achieving a Recall@1 of 86% in predicting legal categories (Civil & Criminal Law).
  - Built an automated answer retrieval pipeline using TF-IDF Vectorization and Cosine Similarity to return the most relevant legal response based on user queries.
- System Maintenance:
  - Utilized Git for version control, code management, and maintaining system workflow stability.

GitHub : https://github.com/nguyenkhanhpro/Consignment.git December 2025 - *Present*

Consignment Management System

Technologies: Node.js, Express.js, React.js, MySQL, RESTful API, Selenium, Bootstrap, Git

- Developed a full-stack consignment management web application using React.js for the frontend and Node.js/Express.js for the backend with a separated MVC architecture.
- Designed and implemented MySQL database schema to manage users, products, brands, product categories, consignment tickets, orders, and transaction details.
- Developed RESTful API endpoints for authentication, product consignment, product approval, order management, and customer/admin workflows.
- Built reusable React components and integrated frontend interfaces with backend APIs to provide a responsive user experience.
- Implemented automated web testing scripts using Selenium WebDriver to simulate user behaviors and verify critical workflows such as login, product submission, and order processing.
- Used Git for version control and maintained a structured frontend/backend codebase for easier development and maintenance.

SKILLS

Technical Skills:

Programming Languages:
- Python, C++, SQL

Python & Automation:
- Requests, BeautifulSoup, Selenium,
- Web Scraping, Data Automation, Browser Automation

Data Engineering:
- ETL Pipeline Development
- Data Collection, Data Cleaning, Data Transformation
- Dataset Construction
- SQL Database Processing (MySQL, MongoDB)

LLMs & AI Agents:
- Prompt Engineering

Frameworks & Libraries:
- PyTorch, TensorFlow, Keras
- Hugging Face Transformers
- Scikit-learn
- Pandas, NumPy
- Flask, FastAPI
- Gradio

Backend & Deployment:
- REST API Development
- Model Inference Pipeline
- Git, GitHub

Tools:
- Google Colab
- Jupyter Notebook
- VS Code

Soft Skills:

- Strong teamwork and cross-functional collaboration skills developed through academic and AI project experience.
- Effective analytical and problem-solving abilities for evaluating AI model performance and identifying improvement opportunities.
- Fast learner with strong adaptability to new technologies, tools, and project requirements.
- Responsible, detail-oriented, and capable of working independently under deadlines.
- Good communication skills with the ability to present technical findings clearly and professionally.
  - English proficiency sufficient for reading technical documentation, research papers, and communicating in professional environments.

CERTIFICATIONS

IELTS Academic – Overall Band 5.0 : Odin English Center 2023 – Present

EDUCATION

Hanoi University of Mining and Geology *2022* - Present

High-Quality Information Technology Program

GPA: 3.2/4.0
