Ho Chi Minh City University of Technology (HUTECH)
Data Science — GPA: 3.65 / 4.0

Ho Chi Minh City
2022- 2026

EXPERIENCE

Thu Thiem Power Company — EVN HCMC (Project Management Board)
Intern

Ho Chi Minh City
June 2025 – March 2026

PPE Compliance Detection (Computer Vision)

- Developed an AI computer vision model for helmet compliance detection among electricity field workers, reducing reliance on manual safety inspections.
- Evaluated and tested the model on field-test data, achieving 88.7% recall and 82.4% precision. Refined model performance through data augmentation and threshold tuning based on technician feedback, and presented deployment-ready results to company leadership.

Electricity Load Forecasting (Time-Series Analysis)

- Built a Power BI dashboard analyzing electricity load patterns in the Thu Thiem area, visualizing the impact of weather, day-of-week, and holiday factors on demand fluctuations to inform forecasting model design.
- Built a medium-term load forecasting model using SARIMAX, achieving 10.4% MAPE on test data by incorporating weather, holiday, and seasonal heat-wave factors as exogenous variables to support proactive grid operation planning.

SELECTED PROJECTS

Vietnamese Legal QA System | [GitHub](#)

2026

- Built a multimodal RAG chatbot for Vietnamese legal question answering using the Gemini API, supporting text, voice, and image inputs from scanned PDFs and audio data. Achieved 0.79 faithfulness and 0.83 answer relevance in evaluation.
- Designed retrieval-stage prompts and automated the document ingestion pipeline, including PDF extraction, chunking, and embedding, reducing processing time from hours to minutes and enabling scalable knowledge-base updates.

AMaDas Research Group Website | [Link](#)

2026

- Contributed to frontend development of the AMaDas Research Group website, a platform introducing the research group's members, publications, and collaboration opportunities to visitors and potential partners.
- Proposed the UI design concept and page layout, then implemented the responsive interface using HTML, CSS, and JavaScript, ensuring a clean and easy-to-navigate user experience.

QR Attendance App | [GitHub](#)

2026

- Built a cross-platform attendance management app using Flutter and Firebase, featuring role-based access, QR check-in, session management, attendance tracking, and reporting.
- Used Firebase Authentication and Cloud Firestore for user management, real-time data synchronization, statistics, charts, and CSV/PDF export.

E-Commerce Product Clustering | [GitHub](#), [DOI](#)

2025

- Performed exploratory data analysis (EDA) to identify quality issues across a messy product dataset, applied data cleaning and normalization, and validated outputs ensuring data accuracy and reducing downstream modeling errors.
- Applied and compared clustering approaches (TF-IDF vs. Transformer embeddings) to automatically group similar products into distinct categories, then delivered an analysis report with visualizations helping business teams make more informed catalog organization and management decisions.

SKILLS & LANGUAGES

AI & Automation Tools: ChatGPT, Claude, Gemini (rapid prototyping, coding assistance, product development).

Programming & Tools: Python, R, Java, Git, HTML, SQL

Languages: English (VSTEP, Level B2 — equivalent to IELTS 5.5–6.0)

CERTIFICATIONS, AWARDS & PUBLICATIONS

- IBM Data Science Professional Certificate — IBM via Coursera (2025, [verify](#)); Microsoft Power BI Data Analyst Professional Certificate — Microsoft via Coursera (2026, [verify](#)) ; VSTEP English Proficiency — Level B2 (2025).
- HUTECH IT Got Talent — 2nd Place (2024), Research Award — Honorable Mention (2026).

Publications (5 peer-reviewed papers, 2025–2026), incl.:

- From TF-IDF to Transformer-Based Models: E-Commerce Clustering | [DOI](#)
- Topology-Driven Rough Set Classification for Healthcare Intelligence (ACIIDS 2026) | [DOI](#) (+3 more)
