Trần Minh Thắng

Back-end developer

PERSONAL INFORMATION

0362336362

29/07/2003

thangtran29.work@gmail.com

Ho Chi Minh City

CAREER GOAL

I am fresher to the IT field so I need to find a stable environment to develop my back-end expertise, especially with .NET, database and API. I want to work in a professional environment, gain experience and contribute to highly applicable products.

EDUCATION

FPT University 2021 - 2025

Education level: University

- Major: Software Engineering
- GPA: 7.92 / 10
- Graduation Project: Smart table reservation and food ordering management system at restaurants

CERTIFICATE

Coursera

- Academic Skills for University Success
- Computer Communications
- CertNexus Certified Ethical Emerging Technologist
- Web Design for Everybody: Basics of Web Development & Coding
- Academic English: Writing
- Project Management Principles and Practices
- User Experience Research and Design
- Software Development Lifecycle

Certificate: https://www.linkedin.com/in/thang-tran-911499371/details/certifications/

SKILLS

PROGRAMMING LANGUAGE

C, C++, Java, Python, C#

FRAMEWORK & RUNTIME

.NET Framework, ASP.NET MVC, ASP.NET Core, Entity Framework, Spring Boot

DATABASE

MySQL, MongoDB, SQL Server

API & AUTHENTICATION

RESTful API (ASP.NET Web API), Swagger, JWT, OAuth2

TESTING

API Testing (Postman), UI Testing (Selenium)

TOOLS & DEVOPS

Git, GitHub, Docker, CI/CD (GitHub Actions)

SOFT SKILL

Communicate, work effectively in teams, familiar with Agile/Scrum model

FOREIGH LANGUAGE

Reading technical documents and basic English communication

WORK EXPERIENCE

Intership at BIWOCO company 05/2024 - 06/2024

BACK-END DEVELOPER

- Learn about Amazon Web Service (S3 bucket, CI/CD, API...), Python programming language, MongoDB database.

Graduation project "DineGO" 05/2025 - 08/2025

BACK-END DEVELOPER

- **DineGO** – Smart restaurant reservation system developed in 3 months by a team of 5 members, with a complete process from analysis, design to implementation and documentation.
- Build a restaurant reservation system that helps customers easily search, view available tables and make reservations in real time. The application is designed with a responsive web interface, helping users to use it conveniently on both computers and phones, minimizing errors when booking tables and improving user experience.
- For restaurants, the system supports effective reservation management, optimizes table arrangements and provides analytical reports to improve service quality.
- The system uses ASP.NET (C#) as the main platform, SQL Server for data management, aiming to expand with features such as pre-ordering, online payment and delivery integration.
