184 Bai Say, Ward Binh Tien, District 6, Ho Chi Minh

EDUCATION

DHV University (Oct 2021 - Sep 2025)

Major: Software Engineering

GPA: 3.12/4.0

Strong foundation in Python, C++, Web Full-Stack development, and RDBMS. Applying engineering best practices to build scalable systems, now transitioning into AI Engineering.

TECHNICAL SKILLS

Backend

Python, FastAPI, C++, RESTful API, C#, Node.js.

Database & Storage

MySQL, SQL Server.

AI/Machine Learning

LLMs, Prompt Engineering, LangChain, LlamaIndex, PyTorch.

Frontend

JavaScript, React, JSON.

SOFT SKILLS

Time management.
Team work.
Independent research.

SUMMARY

Software Engineering graduate (DHV University) passionate about applying LLMs to real-world business workflows. Built AI Agents for the logistics & customs domain — extracting structured data from MSDS documents and automating ECUS5VNACCS customs declarations, reducing manual data-entry significantly. Skilled in Python, FastAPI, prompt engineering, and OCR pipelines. Aiming to grow into an AI Engineer specializing in production LLM systems within 3 years.

WORK EXPERIENCE

HITEAK FURNITURE COMPANY

Full-stack Developer 04/2026 - NOW

- **Frontend Development & UI Customization:** Led the frontend development for a high-end e-commerce platform on Shopify. Translated design mockups into highly responsive, pixel-perfect user interfaces, ensuring strict adherence to the brand's minimalist and luxury aesthetics.
- **Custom Shopify Implementation:** Wrote custom Liquid code and CSS to implement complex UI sections, Mega Menus, dynamic collection grids, and blogs. Ensured a highly refined user experience by focusing on precise typography, smooth visual flow, and meticulous layout spacing—including exact pixel alignments and gaps for navigation elements.
- **Post-Launch Maintenance & Troubleshooting:** Managed the active monitoring and warranty phase. Continuously tracked live site performance and provided immediate technical support to troubleshoot and resolve any production environment edge cases.
- **Project Delivery & Success:** Successfully delivered a fully functional, premium storefront that perfectly matched the original design vision, ensuring a flawless and stable user experience during the live operation phase.

Maritime Transport and Service Joint Stock Company (Tra-Sas)

AI Engineer (Internship) 08/2025 - 11/2025

- **AI Agent Development & Prompt Engineering:** Spearheaded the development of an AI Agent designed to extract and classify chemical data from Material Safety Data Sheets (MSDS). Engineered multi-phase, structured prompts to accurately parse specific document areas (Sections 1, 2, 3, 7, 9, and 14), ensuring the AI correctly prioritized technical chemical classifications over generic descriptive terms.
- **Preprocessing Pipeline & OCR Implementation:** Overcame a persistent 5% error rate caused by unpredictable client PDF layouts by implementing a robust preprocessing pipeline. Utilized OCR technology to extract text from diverse PDFs and standardize it into a single Word template before feeding it to the AI model.

LANGUAGES

English (Basics).

Japanese (Basics).

- **Data Integration & Output Mapping:** Managed the data output process by formatting extracted information into structured JSON arrays and dynamically mapping them directly into the company's required Word and Excel forms.
- **System Optimization & Deployment:** Deployed the system into active testing to handle complex edge cases, enabling continuous refinement of the overall data extraction workflow.

Embedded Software Joint Stock Company (Nata)

AI Integration Engineer (Internship) 06/2025 - 07/2025

- **Process Automation:** Developed a Python-based automation solution to streamline the import/export declaration process for the ECUS5VNACCS customs software.
- **GUI Scripting & Optimization:** Engineered a script utilizing GUI automation to automatically fill in logistics and shipment data, reducing manual data-entry time from ~10 minutes per shipment to under 1 minute (one-click execution) while minimizing human errors during operations.
- **System Integration:** Integrated the automation workflow with the Smartwood web platform, bridging desktop applications with web-based systems and enabling end-to-end shipment handling.
- **Database Management & Streamlining:** Enabled one-click execution for the entire customs data-entry process by configuring the system to automatically retrieve and process saved shipment data directly from a MySQL database, processing ~30 shipments per day.

Blue_Sky Company

Full-stack Developer (Internship) 08/2024 - 10/2024

- **Module Development:** Built the invoice-export module (bill xuất hàng) using React frontend and ASP.NET/C# backend, integrated with SQL Server for transaction persistence and reporting.
- **System Configuration UI:** Developed the File Setting page allowing admins to configure system parameters dynamically without requiring application redeployment.
- **Quality Assurance & Debugging:** Identified and resolved bugs reported by the QA team across the invoice and configuration modules, contributing to release stability of the assigned web modules.
