EDUCATION

VNUHCM - University of Science

Bachelor of Science in Computer Science

Ho Chi Minh City, Vietnam

Sep 2024 – Present

- GPA: 3.7/4.0
- Program: Advanced Program in Computer Science
- Admission: Direct entry with 50% tuition scholarship

TECHNICAL SKILLS

Languages: C++, Python, JavaScript

Core Concepts: Machine Learning (Diffusion, Transformers, CNN, NLP), Data Structures and Algorithms, OOP

Frameworks & Libraries: PyTorch, Pandas, OpenCV, Flask, FastAPI

Database: SQLite, PostgreSQL, Microsoft SQL Server

Tools & Environment: Git, GitHub, Docker, Postman, Linux

EXPERIENCE

Undergraduate Research Assistant

Nov 2025 – Present

VNUHCM - University of Science

- Conducted literature review on **discrete diffusion models** and **masking** strategies for LLMs
- Analyzed existing methods to identify research gaps and inform new masking approaches
- Collaborated on early-stage ideation for a research paper

AWARDS AND HONORS

Participant - ICPC National Vietnam

2025

Represented VNUHCM - University of Science as one of the university teams (Team FreeDRL)

Participant - Vietnam IMO Team Selection Test

2024

Top 50 best high school students in Mathematics

Second Prize – Vietnam National Mathematics Olympiad

2023, 2024

Two-time Second Prize winner in 2023 and 2024

CERTIFICATIONS

IELTS

British Council

Overall 7.5 (Reading 9.0, Listening 8.0, Speaking 6.5, Writing 6.5)

Oct 2023

PROJECTS

OmniLocal: Agentic Framework for Cross-Cultural Content Adaptation

Mar 2026 – May 2026

Top 6 Finalist, GDGOC Hackathon Vietnam 2026

- Built a 3-stage pipeline (background transformation → object replacement → Vietnamese text rendering) to automatically adapt images to cross-cultural markets
- Integrated **Qwen-Image-Edit 2509** with a 4-step Lightning LoRA via ComfyUI to achieve fast diffusion inference on cloud GPU
- Rendered Vietnamese text using a hybrid of cv2 inpainting for full control and precision, and Qwen Image Edit for completion and aesthetic

LocalFood: HCMC AI Tourism Planner

Oct 2025 – Dec 2025

Multi-Agent System for Personalized Local Food and Itinerary Recommendations

- Built backend **RESTful** APIs using **Flask** to serve structured data
- Scraped restaurant data using **Selenium** and organized it into structured format for backend APIs
- Stored and managed restaurant data in **SQLite** database to power the AI agent's knowledge base
- Improved query performance by **caching** search history to reduce LLM response latency
