SUMMARY

- Final-year Computer Science student at HCMUT who ships real products: a production-deployed AI travel platform (Wanderlust, 9.2/10) with a self-hosted LLM/RAG pipeline, a campus marketplace as Tech Lead (UniJob), and a personal DSA visualizer web app — all live with real users. Experienced in integrating AI/LLM pipelines and third-party APIs into full-stack web products from idea to deployment.
- Builds across the full stack (React/TypeScript, Spring Boot/Java, FastAPI/Python) with hands-on AI integration experience (NLU, NER, RAG, LLM inference, ChromaDB, sentence-transformers) and a strong interest in using AI to build products that create real value. English (IELTS 6.0), Vietnamese (native).

EDUCATION

Ho Chi Minh University of Technology (HCMUT) - VNUHCM

Oct 2021 - Nov 2026

Computer Science, Japanese Enhancement Programme

3.3/4 GPA (7.78/10)

- **Selected coursework:** Graduation Thesis (9.2/10), Software Project Management (9.2/10), Computer Networks (9.1/10), E-Commerce (8.8/10), Introduction to Artificial Intelligence (8.7/10), Software Engineering & Advanced Software Engineering (8.1/10).

EXPERIENCE

Software Engineer Intern

Jun 2024 - Aug 2024

Sorimachi Vietnam

Ho Chi Minh City, Vietnam

- Built document-export features in a C#/.NET web application: generated consolidated payment-total reports and order invoices, unifying source files from CSV, Excel and Word into standardized PDF output.
- Implemented and refined multiple ASP.NET (C#) front-end pages, improving UI layout and consistency.
- Performed black-box testing with Katalon to verify business flows and surface defects before release.

PROJECTS

Graduation Thesis — Wanderlust: AI Travel Booking Platform

[Live Demo](#) | [Source Code](#)

- Shipped a production AI web app with real users: a full-stack travel booking platform with a self-hosted AI chatbot (NLU + NER + RAG pipeline using ChromaDB, sentence-transformers, SeaLLMs-v3-7B-Chat) — built without any third-party LLM API, equivalent in architecture to integrating OpenAI/Claude/Gemini APIs but fully self-hosted and deployable on CPU or GPU.
- Took the product from a broken 2-person prototype (no AI, no tests, no deployment) to a live system across 3 cloud platforms (Railway, Hugging Face Spaces, Vercel) with CI/CD, 644 test cases at 100% pass rate, and features including 4-language i18n (VI/EN/JA/KO), Dark Mode, PWA, Stripe payments and OAuth2 login.
- Built the full product: React 18 + TypeScript (frontend), Spring Boot 3.4 + Java 25 and FastAPI/Python (backend), MongoDB with ACID transactions. Team thesis graded **9.2/10 (A)**.

E-Commerce Assignment: UniJob — Campus Task Marketplace

[Source Code](#)

- Tech Lead on a 5-person team: designed the product architecture, set up the project, reviewed code, and owned deployment (Docker + Nginx) for a campus marketplace connecting students, lecturers and clubs for short-term tasks.
- Wrote ~50% of the backend services: job posting/search, user profiles, CV export, payments, ratings, gamification, notifications and work history — using React 19, TypeScript, Tailwind CSS v4, Firebase (Auth, Firestore, Storage), Zustand and TanStack Query.

Personal Project: DSA Visualizer — Algorithm Learning Web Tool

[Source Code](#)

- Solo-built an interactive web platform for learning 24+ data structures and algorithms (sorting, trees, graphs, advanced algorithms) through animation — designed, developed and deployed entirely independently using Next.js 15, TypeScript, Tailwind CSS and Shadcn/ui.

Introduction to AI Assignment: AI Travel Planner & Recommender System

[Source Code](#)

- Built an intelligent travel-planning system (4-person team) integrating 5 AI techniques (A* search, CSP backtracking, rule-based reasoning, Bayesian networks, ML classification) and processing 800,000+ records from 5 Kaggle datasets using Python, pandas and scikit-learn.

Database System Assignment: Electronic Library System

[Source Code](#)

- Full-stack web app (4-person team): HTML/CSS/JavaScript frontend, PHP backend, relational SQL database — book/newspaper purchase and rental platform with vouchers, comments and ratings.

TECHNICAL SKILLS

AI / LLM Integration: RAG pipeline (ChromaDB, sentence-transformers, LLM inference), NLU/NER pipeline, self-hosted LLM (SeaLLMs-v3-7B-Chat); architecture equivalent to OpenAI / Claude / Gemini API integration; Python (NumPy, pandas, scikit-learn)

Full-Stack: React 19/18, TypeScript, Next.js 15, Tailwind CSS (frontend); Spring Boot (Java), FastAPI (Python), ASP.NET (C#), Node.js (backend)

Database & Cloud: MySQL, MongoDB (ACID), ChromaDB, Firebase (Firestore/Auth/Storage); Docker, Railway, Vercel, Hugging Face Spaces, CI/CD

API & Automation: REST API design, OAuth2/JWT, Stripe, third-party API integration, automation pipeline design

Languages: Advanced Python, C++, C; Intermediate Java, C#, JavaScript/TypeScript

Developer Tools: Git & GitHub, Jupyter Notebook, Postman, VS Code, PyCharm, Figma

Language: English - IELTS 6.0 (April 2023); Japanese - JLPT N3 (February 2026)

COURSES & CERTIFICATIONS

- **Coursera:** Supervised Machine Learning: Regression & Classification.
- **Udemy:** Complete A.I. & Machine Learning, Data Science Bootcamp, Deep Learning: Neural Networks & AI, Machine Learning: AI, Python & R, The Complete 2024 Web Development Bootcamp, 100 Days of Code: Python Pro Bootcamp, MySQL Database Administration, Build Stock Market Web with Node & JavaScript.
