CAREER GOAL

Backend-focused developer with a strong foundation in system architecture and practical experience building scalable ERP systems. Dedicated to optimizing system performance, integrating complex APIs, and delivering maintainable, high-efficiency solutions for real-world products.

SKILLS

- Programming language: JavaScript, Java, TypeScript.
- Framework: ReactJs, Bootstrap, ExpressJs, Springboot
- Others: MySQL, Git, PostgreSQL, MongoDB, Jira, NodeJs, NestJs.

WORK EXPERIENCE

Kaopiz Software | December 2025 - May 2026 | Software Developer

- **Logistics ERP System:** Designed and implemented scalable system architecture (ERD/SRS) using **Laravel** and **ReactJS** to support stable multi-branch operations.
- **API & Webhook Integration:** Developed bi-directional data synchronization with Lark Suite, **reducing manual data entry by 60%** and ensuring **real-time data integrity**.
- **Process Automation:** Automated **payroll processing and reporting for large datasets**, improving system performance and eliminating manual calculation errors.
- **Frontend Optimization:** Built **10+ reusable UI components** using ReactJS, significantly improving development speed and ensuring UI/UX consistency across the system
- **CMS Customization:** Built custom PHP plugins and 10+ reusable components, increasing page-building efficiency for non-technical users
- **Wordpress Project:** Built 10+ element UXBuilder and 5 custom post type to customize website follow customer requirements

Bitsness - A.I Automation Agency | April 2025 - November 2025 | Intern BE Developer

- **AI Data Pipeline:** Developed an **automated workflow to crawl YouTube videos** and extract frames by FFmpeg for AI analysis.
- **AI API Integration:** Implemented AI API calls to **analyze video highlights, automating the generation** of scripts for high-engagement content (using queue).

PERSONAL PROJECTS

E-master-website

- Developed **20+ RESTful APIs** to manage **AI-generated learning paths** and user progress, achieving an average **response time under 300ms**.
- Utilized **Docker** to containerize the application, ensuring **100% environment consistency** and making the system **deployment-ready** for cloud infrastructure.

Booking Hotel System

- Built a **full-stack booking system** featuring **Role-Based Access Control (RBAC)** to securely manage room inventory and user workflows.
- Designed and **implemented RESTful APIs** to handle **real-time booking operations** and **user management**.

EDUCATION

Ha Noi University

-

Falcuty of Information Technoloy/Software Engineer

Sep 2022 - June 2026
