LinkedIn: [linkedin.com/in/quang-huy-nghiem](https://www.linkedin.com/in/quang-huy-nghiem) GitHub: github.com/HuyinCP
Ho Chi Minh City, Viet Nam

EDUCATION

HCMC University of Technology and Engineering	2023 – Present
Bachelor's Degree in Computer Science	
Expected Graduation: Sep 2027	GPA: 3.31 / 4.0

ACHIEVEMENTS

Honorable Mention — ICPC Asia Pacific Championship 2026	Taiwan
Gold Medal — ICPC Asia Ho Chi Minh City Regional Contest 2025	Vietnam
First Prize — ICPC Vietnam National Programming Contest 2025	Vietnam
Rank 40 — ICPC Asia Pacific Championship 2025	Singapore
Bronze Medal — ICPC Asia Hanoi Regional Contest 2024	Vietnam
First Prize — ICPC Vietnam National Programming Contest 2024	Vietnam
Champion — R.ODE Battle (Backend Round) 2024 FPT University HCM (F-Code Club)	Vietnam
2nd Runner-up (Gold Medal) — Da Nang Code League 2024 (Code Warrior Round) FPT Software Danang and DaNang University of Science and Technology	Vietnam

TECHNICAL SKILLS

Languages	C++, Python, Java, Kotlin
Generative AI / LLM	LangChain, Ollama, Prompt Engineering, Structured Output (Pydantic), RAG, Vector Databases (Chroma / FAISS)
Machine Learning	Supervised & Unsupervised Learning, Model Evaluation, Feature Engineering
Deep Learning	Neural Networks, CNN, RNN, LSTM, Optimization Techniques
Frameworks & Tools	PyTorch, Hugging Face, Gymnasium, Stable-Baselines3, Flask, Git
Databases	PostgreSQL, MySQL, SQL Server
Big Data	Apache Hive, HDFS

PROJECTS

Smart Assistant: Local LLM Customer-Service Analyzer

Jun 2026 – Present

Personal Project

GitHub

- Built a privacy-first assistant that runs **Qwen 2.5 (7B)** fully **locally via Ollama**, turning a raw customer message into a structured summary, sentiment score, recommended action, and suggested reply.
- Designed a **LangChain LCEL** pipeline (`PromptTemplate` | `ChatOllama` | `JsonOutputParser`) with a **Pydantic** schema to guarantee reliable, machine-readable JSON output.
- Served the pipeline through a **Flask** REST API and a lightweight web UI; applied prompt engineering to enforce language and output-format constraints.
- Built a structured Vietnamese customer-service knowledge base (return & warranty policy, refund timelines, C-return complaint workflow) to serve as the retrieval source for a planned **RAG** pipeline that grounds replies in real policy.

CineSense: NLP Movie Recommendation System

Jan – May 2026

NLP Course Project

- Contributed to an NLP-based movie recommendation system, focusing on semantic search and ranking components.
- Developed a hybrid retrieval model using **TF-IDF** and **fine-tuned SBERT** to improve text similarity and recommendation quality.

Agent-RF Multifloor Maze Game

Jan – May 2026

Reinforcement Learning Course Project

GitHub

- Built a **multi-floor maze** RL environment with procedural maps, traps, key/door puzzles, and enemy AI (patrol, chaser, sniper) using **Gymnasium**.
- Trained agents with **PPO/A2C (Stable-Baselines3)** via a **9-level curriculum** and benchmarked 5 training configurations on win rate and reward.
- Implemented a lightweight **CNN + vector** policy (approximately 50K params) and an evaluation pipeline.

Bike-Sharing Data Lakehouse & Analytics Pipeline

2026

Data Engineering / Data Science Project

GitHub

- Built reproducible **ETL/ELT workflows** to ingest, clean, standardize, and analyze 13 months of trip data from Citi Bike, Divvy, and Capital Bikeshare.
- Organized raw and curated datasets as **Parquet** layers and used **DuckDB** for efficient SQL-based transformations and analytical queries in a lakehouse-style workflow.
- Automated multi-source processing with reusable **Python batch scripts** and explicit data-quality and business validation rules.
