github.com/Tran-Nhat-Minh

AI-focused Software Engineering student building production AI agents and LLM integrations — hierarchical multi-agent orchestration, tool/function-calling, RAG, and agent memory in Python (FastAPI) with LLM APIs (Gemini/Vertex AI, Claude, OpenAI). Solid full-stack foundation (Java/Spring Boot, React) and system design. A fast, self-driven learner who digs into the “why”, not just the “how”.

EDUCATION

Ho Chi Minh City University of Technology and Engineering (HCMUTE)

Bachelor of Software Engineering
Expected Graduation: Aug 2026

Sep 2022 - Aug 2026

GPA: 3.0 / 4.0

SKILLS

AI / LLM: Multi-agent orchestration, tool/function-calling, RAG, agent memory, LLM APIs (Gemini/Vertex AI, Claude, OpenAI), Qdrant vector search, embeddings, prompt engineering; familiar with LangGraph/CrewAI concepts

Languages: Java, Python, C++, JavaScript, SQL

Frameworks and Libraries: Spring Boot, Spring Security, Spring Data JPA, FastAPI

Database Management Systems: MySQL, MS SQL Server, Firebase Firestore, Qdrant (Vector Database)

Cloud & Architecture: RESTful APIs, Microservices (Spring Cloud, Eureka, OpenFeign), JWT Authentication

Tools: Git, GitHub, Postman, VS Code, Android Studio, Figma

Others:

- Good understanding of OOP methodologies, Data Structures and Algorithms
- Highly responsible, adaptable under pressure, with excellent individual and teamwork skills.

EXPERIENCES

AI Backend Intern | Hitek Solution (3 months)

Oct 2025 – Jan 2026

- Worked on an enterprise AI agent platform integrating Retrieval-Augmented Generation (RAG) with role-based access control.
- Responsibilities:
 - Designed and implemented authentication and authorization services using JWT-based security.
 - Developed RBAC access control to manage user roles and permissions across the system.
 - Built a document ingestion pipeline to upload, process, and index files into Qdrant vector database for RAG retrieval.
 - Designed and implemented RESTful APIs for document management and usage tracking.

PROJECTS

Siupo AI Service — Autonomous Multi-Agent & RAG System| *Full-Stack + AI*

Jan 2026 – Present

- **Project Github:** <https://github.com/minh-tran-2611/Siupo-ai-service.git>
- **Project Description:** An asynchronous AI service integrated into the Siupo ecosystem, leveraging a hierarchical Multi-Agent framework and RAG to enable automated business intelligence and restaurant management via natural language.
- **Multi-Agent Orchestration:** Developed an async AI service using **FastAPI** and **Gemini 2.5 Flash (Google ADK)**; engineered an Orchestrator routing to sub-agents backed by **45+ native function-calling tools** with self-correction.
- **RAG & Memory Pipeline:** Built a document ingestion pipeline using Qdrant Vector DB + Vertex AI embeddings (text-embedding-004). Designed a 3-tier memory layer (RAM Cache + Turso DB) with a Lazy-Write storage strategy.
- **Business Intelligence & Automation:** Engineered analytics sub-agents exposing 8+ reporting tools that turn natural-language questions into BE API calls and Vietnamese business insights (revenue, bookings, customers).

GenData Agent — Multi-Agent Synthetic Data Platform| *Personal Project | AI*

May 2026 – Present

- **Project Github:** https://github.com/minh-tran-2611/GenData_agent
- **Multi-Agent Generation:** Built an Orchestrator (LLM) that analyzes a business and spawns customer-segment sub-agents to simulate realistic users/orders from day 0, with growth curves and file-based memory across runs.
- **LLM-Agnostic & Output:** Pluggable LLM backends (Gemini/Vertex AI, Claude, OpenAI) via tool-driven flows; outputs through live REST API calls or direct SQL matched to a production schema (FastAPI + React).

Siupo Restaurant — Full-Stack| *Team Project | Full-Stack Web*

Aug 2025 - Jan 2026

- **Project Github:** <https://github.com/minh-tran-2611/Siupo-Restaurant.git>
 - A multi-tenant B2B SaaS platform digitizing restaurant operations, featuring automated table allocation, real-time tracking, interactive admin dashboards, and integrated payment gateways.
 - **Payments & Security:** Integrated MoMo Payment Gateway (HMAC SHA256); central auth with Spring Security + OAuth2 (Google), JWT rotation & RBAC for multi-tenant access.
 - **Real-Time & DevOps:** WebSocket (STOMP) real-time order-state sync; Redis caching for OTP/session; React 19 frontend; containerized with Docker & Nginx.

CERTIFICATIONS

TOEIC Certificate 735/990

Jan 2025
