

Intern Web FullStack

PERSONAL DETAILS

Name : Phung Tuan Hai
Nationality : Viet Nam
Sex : Male
DoB : 03/06/2005
Email : tuanhai362005t@gmail.com
Phone : 0983019065
Github : [My Github](#)
Portfolio : <https://www.phunghai.online/>

OBJECTIVE

- I am seeking a Fullstack developer internship position where I can apply my knowledge of Java, Spring Boot, and React.js to real-world projects. My goal is to continuously improve my technical expertise, teamwork skills, and problem-solving abilities, while contributing to high-quality software solutions.

PROFESSIONAL SUMMARY

- Proficient in Java and fullstack development with Spring Boot and React.
- Experienced in building RESTful APIs, implementing JWT authentication, and developing real-time features using WebSocket.
- Familiar with both SQL and NoSQL databases (MySQL, PostgreSQL, MongoDB, Redis).
- Solid foundation in system design, security, and performance optimization.
- Fast learner, team-oriented, and adaptable to new technologies

EDUCATION & CERTIFICATED

From	To	School	Major
09/2003	Present	FPT UNIVERSITY	Software Engineering

- [Academic Skills for University Success Specialization \(The University of Sydney\)](#)
- [Software Development Lifecycle Specialization \(University of Minnesota\)](#)

- [Web Design for Everybody : Basics of Web Development & Coding Specialization \(University of Michigan\)](#)
- [Project Management Project](#)
- [The Complete JavaScript Developer: Learn Modern JavaScript](#)

WORK EXPERIENCE

From	To	Company	Position
9/2025	12/2025	Vnpt Media Software-Huynh Thuc Khang	Developer

TECHNOLOGY AND DEVELOPMENT SKILLS

Languages: Java (Primary), Javascript, C , SQL

Backend: Spring Boot, Servlet, RESTful API, WebSocket, Thymeleaf/JSP

Frontend: React, HTML, CSS , Bootstrap, Radix UI, Lucide-react, other library

Database: SQL Server, MySQL, PostgreSQL, MongoDB, Redis

Testing & Quality Assurance: Basic JUnit, Selenium WebDriver (UI Automation), SonarQube

Main Tools: Git, GitHub, IntelliJ IDEA, NetBeans, VS Code, Postman, Jira, Visual Paradigm

Soft Skills: Communication, Teamwork, Problem Solving, Time Management, Self-Learning,

LANGUAGES

Language	Skill	Level	Note
English	Reading,Listening,Speaking	B1	Ielts 5.5

PROJECT LIST

KIVICARE HOSPITAL MANAGEMENT SYSTEM (12/05/2025- 15/07/2025)

Project description *	KiviCare is a hospital management system designed to optimize appointment scheduling, patient record management, and communication between patients and doctors. The system allows users to easily book appointments, view doctor availability, and manage personal health information. It also enables users to purchase medical products and receive coupons.
Team size	10
Position	FullStack Developer
Responsibilities *	• Developed CRUD operations for users, patients, staff, products, and appointments, with full field validation using Spring Validation • Implemented search, filtering, and pagination for all entity pages. • Tracked edit history (editor, action, timestamp, affected entity ID) across all entities • Developed department statistics dashboard (number of doctors, number of completed appointments, etc...) • Manage and restore deleted entities • Backup and restore data • Assign coupons to products/users • Send coupon code template via email to user (effective date, expiry date, discount value, coupon name)
Programming Language/Framework *	Java (Spring Boot) , React Js
Tech Stack	Backend • Framework: Spring Boot • ORM: Spring Data JPA • Security: Spring Security, JWT • API: RESTful API • Email Service: JavaMailSender • Media Storage: Cloudinary Frontend • Framework: React • HTTP Client: Axios
Main Tool *	Intellij IDEA, VS Code , Postman , Git , Github
Platform, server and database *	MySQL

Methodology	Agile scrum
-------------	-------------

Social map platform (27/10/2025 - 25/12/2025)

Project description *	Social Maps is a map-based social networking platform that allows interaction with maps, real-time connection with friends, business location management (revenue, menu, staff, status, etc.), combined with a modern experience (Drag & Drop location to share realtime/save notes).
Team size	Personal Project
Position	FullStack Developer
Key Function Implement *	• Built a social map platform with Mapbox GL JS, featuring interactive markers, clustering, viewport-based loading, and detailed popup exploration • Implemented authentication & authorization system (register, email verification, login, JWT, refresh token, password reset) with role-based access control (User/Seller/Admin) • Developed user profile management with avatar/cover upload and business constraints handling (at least 2 week to change name) • Built social features including friendship system (request/accept/remove) and relationship state management • Implemented search & discovery system supporting keyword-based and map-based search across locations, shops, and users, with search history • Developed real-time chat system using WebSocket (STOMP + SockJS) with typing indicators, read receipts, unread counters, and conversation management • Built drag-and-drop location sharing from map to chat with real-time preview messages(save message json in mongo db with type location) • Implemented drag-and-drop of map location markers into notes for saving favorite places,

	timeline foodtour, etc..(temporarily stored in localStorage) ● Implemented shop management system with geolocation, seller ownership, admin approval workflow, and soft delete ● Integrated Cloudinary (media storage) and Redis (caching & shop status: open/busy/full/quiet) ● Developed admin dashboard features for managing users, shops, and seller approval workflows ● Implemented protected routes and permission guards across User, Seller, and Admin areas
Programming Language/Framework *	Java (Spring Boot) , React Js
Tech Stack	Backend ● Framework: Spring Boot ● ORM: Spring Data JPA ● Security: Spring Security, JWT ● API: RESTful API, WebSocket, STOMP ● Email Service: JavaMailSender ● Media Storage: Cloudinary ● API Documentation: Swagger (OpenAPI) Frontend ● Framework: React ● Map Library: Mapbox GL JS ● HTTP Client: Axios ● Realtime Communication: STOMP, SockJS
Main Tool *	Intellij IDEA, VS Code , Postman , Git , Github
Platform, server and database *	PostgreSQL + PostGIS, MongoDB, Redis

ESNEAKER E-COMMERCE PLATFORM (In 3/2026)

Project description *	Esneaker is a scalable e-commerce platform for sneakers with a Grafiy-style user interface, allowing users to select product variations, add items to their cart, checkout online, process payments, and integrate shipping. Website operational features are available for administrators, managers, and staff (inventory management, inventory control, data viewing, etc.).
-----------------------	---

Team size	5
Position	FullStack Developer
Responsibilities *	• Implemented full CRUD Product Catalog and SKU variant management APIs and UI flows • Built inventory module with low-stock monitoring and precise per-variant stock control • Implemented Excel-based batch import/export for inventory data using Apache POI • Developed role-based authorization for manager, staff, and user permissions • Implemented product listing with pagination, filtering, and keyword-based search for efficient data retrieval • Designed and implemented a graffiti-inspired UI system with reusable components and consistent visual styling • Built and integrated a 3D hero banner using Three.js (react-three-fiber) with GLTF models
Programming Language/Framework *	Java (Spring Boot) , React Js
Tech Stack	Backend • Framework: Spring Boot • ORM: Spring Data JPA • Security: Spring Security, JWT • API: RESTful API • Media Storage: Cloudinary Frontend • Framework: React • HTTP Client: Axios • Three js • Shadcn
Main Tool *	Intellij IDEA, VS Code , Postman , Git , Github
Platform, server and database *	MySQL
Methodology	Agile scrum
