

LE HO THANH TUNG

🏠 Ho Chi Minh City
📞 0347341384 (Zalo: 0589327594)
✉ tt8993499@gmail.com
🌐 <https://www.linkedin.com/in/lehothanhtung>

Education

University of Science - VNUHCM

August 2021 – Present

Major: Information Systems

Technical Strengths

Languages	HTML, CSS, JavaScript
Web Frameworks	React
Databases	PostgreSQL, MongoDB
Developer Tools	Git

Languages

English: TOEIC 885

Experience

Quy Vang Trang Khuyet

December 2025 – March 2026

Role: IT Developer Intern (Frontend)

Location: Ho Chi Minh City

Project: Establish a system of nursing homes

🌐 **Link github:** <https://github.com/thanhtung-2k3/CRM-VienDuongLao>

Responsibilities:

- Developed and maintain the responsive user interfaces for project

Capstone Project

Global Conference and Journal Hub

Role: Frontend Developer

Team Size: 4

January 2025 – August 2025

🌐 **Website:** <https://easyconf.edu.vn>

■ **Note:** This project is currently undergoing the copyright registration process and is the subject of a scientific research paper of an international conference taking place in Vietnam.

A comprehensive web platform designed to aggregate global scientific conferences and journals, currently supporting a growing user base of nearly **150 members** registered.

Key Features:

- **Automated Data Pipeline & Monitoring:** Developed a scalable, cron-scheduled data crawling pipeline with an integrated dashboard for real-time monitoring and status visualization.
- **LLM-Powered Information Extraction:** Engineered a cost-effective information extraction pipeline by controlling the LLM's generation process. This involved applying advanced prompting techniques (**Chain-of-Thought**, **few-shot examples**), enforcing a strict **output schema**, and fine-tuning generation parameters (**Thinking mode**, **Temperature**, **TopP**, **TopK**), while leveraging **context caching** to minimize latency and cost.
- **Personalized Recommendation Engine:** Built a hybrid recommendation system using a user-influencer latent factor model. Applied **K-means clustering** for user segmentation and measured vector similarities with **Cosine Similarity** on ratings and **LLM embeddings** reviews to overcome data sparsity and personalize rankings.
- **Real-time Multimodal Chatbot:** Built on **A2A** and **RAG** architecture, where specialized agents collaborate to handle complex user intents. The system utilizes **function calling** that equips the LLM with robust tools, enabling it to seamlessly connect with and query the real-time database and manages conversational state for persistent, **multimodal** interactions (text, voice, image, file).

Responsibilities:

- **Frontend Developer:** Developed some features of the responsive user-facing client portal.

Technology Stack:

- **AI:** Google Gemini (LLM), Gemini Embeddings, Python
- **Frontend:** NextJs, React
- **Backend:** NodeJs, Socket.IO (TypeScript), FastAPI (Python)
- **SQL / NoSQL Databases:** PostgreSQL, MongoDB
- **Web crawling:** Playwright
- **DevOps / Infrastructure:** Docker, Docker Compose (Containerization), Nginx (Reverse Proxy)
- **Cloud hosting environment:** Ubuntu VPS (Azure)

Employee Management

Role: Frontend Developer

Team Size: 4

September 2024 – January 2025

🌐 **Link gitlab:** <https://gitlab.com/ISDG4/employee-management>

A web application that simulates an employee management system.

Responsibilities:

- **Frontend Developer:** Developed some features of the admin interface.

Technology Stack:

- **Frontend:** ReactJS
- **Backend:** Java
- **SQL Databases:** PostgreSQL
