OBJECTIVE

Final-year Software Engineering student specialising in fullstack web development. Seeking an internship to apply skills in building modern web applications, contribute to real-world products, and grow alongside experienced engineers.

EDUCATION

Ho Chi Minh City University of Technology and Engineering (HCMUTE) 2023 – Present
Bachelor of Software Engineering
GPA: **3.58 / 4.0**
Relevant Coursework: Data Structures & Algorithms, Database Management, Object-Oriented Programming, Advanced Web Development
English: TOEIC L&R **950/990**

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript
Frontend	React, Redux Toolkit, TanStack Query, Mantine, Tailwind CSS
Backend & DB	Node.js (Express), Prisma, Mongoose, MongoDB, SQL Server, RESTful API
Libraries	JWT, Axios, Zod
Tools	Git, Github, Postman, Jira

PROJECTS

MiCinema — Cinema Management System 02/2026 – 04/2026
Fullstack Developer · github.com/buihaiduongdev/MiCinema

- **Fullstack Sync:** Enforced **Single Source of Truth (SSOT)** via shared Zod schemas across client and server, eliminating data-contract mismatches between frontend and API layers.
- **Architecture:** Decoupled business logic from UI components using **Custom Hooks**, improving modularity and making each feature independently maintainable.
- **Backend & Middleware:** Built a RESTful API with **Express 5** covering 20+ endpoints, with centralised middleware for JWT authentication, request validation (Zod), and unified error handling.
- **State Management:** Leveraged **TanStack Query** caching to eliminate redundant API calls on repeated navigations, improving perceived performance on data-heavy views.

UTravel — Multi-vendor Hotel Booking Platform 05/2026 – 06/2026
Fullstack Developer · github.com/buihaiduongdev/UTravel

- **Monorepo Architecture:** Architected a fullstack monorepo system integrating React frontend, Express API, and shared TypeScript schemas (Zod) for strict end-to-end type safety and validation.
- **Multi-role System (RBAC):** Engineered a secure Role-Based Access Control system for Customers, Hotel Vendors, and Administrators utilizing JSON Web Tokens (JWT) and Bcrypt.
- **Complex Data Relations:** Designed an optimized relational database schema in **MySQL** via **Prisma ORM** to manage properties, rooms, dynamic pricing, and booking transactions efficiently.
- **State Management:** Managed complex global states across multi-step booking flows and user authentication using **Redux Toolkit**.
- **Modern UI/UX & DevOps:** Developed a responsive interface using **Tailwind CSS v4** and **Mantine UI**. Containerized the entire fullstack system with **Docker** for streamlined local development and deployment.
