

DUC TRINH MINH

Backend Developer | AI Integration Developer

Date of Birth: 29/12/2005

Phone: 0375631301

Website: facebook.com/trinh.minh.uc.578614

Gender: Male

Email: duc29122005@gmail.com

Address: 63 Lo 1, Tu Hoang Resettlement Area, Xuan Phuong, Hanoi

CAREER OBJECTIVE

As a third-year Information Technology student at Hanoi University of Industry, I aim to develop my career in Backend, AI, and Software Engineering. I have experience building backend systems with Java, C#, and Python, while also contributing to AI projects, optimization algorithms, and API integration.

I have a strong foundation in algorithms and problem-solving through programming competitions such as ICPC, Procon Vietnam, and the Informatics Olympiad. I hope to work in a professional environment where I can continue improving my technical skills, teamwork, and ability to build effective software systems.

EDUCATION

2023 - Present Hanoi University of Industry (HaUI)

Information Technology

Major: Information Technology

EXPERIENCE / PROJECTS

2026 - Present Library Management Project

Backend Developer

- Designed and built RESTful APIs using Java Spring Boot.
- Implemented book, user, and borrowing/return management features.
- Worked with MySQL for database design and data queries.
- Used Postman for API testing and backend debugging.
- Applied the MVC pattern and layered code organization to improve maintainability and scalability.
- Used Git/GitHub for source code management.

2025 - Present Research on Type 2 Diabetes Prediction Using Machine Learning

AI Developer

- Participated in the development of a multimodal AI system supporting type 2 diabetes diagnosis from multiple medical data sources.
- Built and optimized Python/PyTorch code for train/test/inference pipelines.
- Supported data processing for ECG, retinal OCT, fundus images, and tabular data for model training.
- Integrated CUDA GPU acceleration for training and inference.
- Built CLI/GUI tools for model training, inference, and data debugging.
- Assisted with Docker environment configuration for deployment and system execution.
- Collaborated with research team members throughout development and testing.

2024 - 2025 Procon Solver Application Project

Backend / AI Integration Developer

- Developed an optimization-solving system in C++ using heuristic algorithms.
- Designed and implemented heuristic evaluation functions to optimize solution quality and system performance.
- Built batch-processing mechanisms and modularized functionality to improve scalability and maintainability.
- Designed API communication flows to receive JSON input and return output through REST APIs.
- Processed JSON request/response data and optimized system response time.
- Worked with frontend team members to build and integrate the application's GUI.
- Collaborated on source code management with Git/GitHub and tested the system in real-world environments.

2024 - 2025 E-commerce Website Project

Backend Engineer

- Developed APIs for login, registration, and product management features.
- Connected to MySQL databases and handled user data processing.
- Studied and applied JWT authentication for user verification.
- Worked with frontend team members to integrate APIs into the website interface.
- Used Git/GitHub for source code management and teamwork.
- Deployed the basic application using Docker and Render/Railway.

ACTIVITIES

2024 - Present Volunteer Club

Volunteer

- Participated in community support and environmental protection activities.
- Strengthened teamwork and event organization skills.

2024 - Present Informatics Olympiad Club

Support Team, Olympic Class

- Supported the organization and management of learning activities for the club's Olympic class.
- Provided technical support, prepared materials, and coordinated with members during activities.
- Improved communication, teamwork, and event support skills.

AWARDS AND ACHIEVEMENTS

- 2026 Top 7 - NAPROCK International Competition
- 2025 Second Prize - National Procon Vietnam Competition
- 2025 Second Prize - Student Informatics Olympiad (Specialized IT Division)
- 2025 First Prize - Procon HaUI Competition
- 2025 Second Prize - School-Level Specialized IT Olympiad
- 2025 Third Prize - School-Level ICPC Competition
- 2024 Second Prize - School-Level ICPC Competition
- 2023 Consolation Prize - School-Level Physics Competition

SKILLS

Programming Languages: C++, C#, Python, Java, SQL

Backend Development: Spring Boot, ASP.NET, RESTful API, FastAPI / Flask, JSON Processing, MVC Architecture

AI / Machine Learning: PyTorch, Machine Learning, Deep Learning, Heuristic Algorithms, Data Processing

Database: SQL Server

Tools & Technologies: Git / GitHub, Docker, Postman, CUDA GPU, Basic Linux
