

PROFILE

Programming educator with 1+ years teaching web development and computer science to university undergraduates and career-changers (JavaScript, React, Node.js, full-stack). Builds on a foundation of hands-on frontend development experience and an active personal full-stack project (Next.js, TypeScript, Supabase) integrating AI and real-time systems — including OpenAI voice interactions, WebRTC sessions, and push notification pipelines. Currently expanding into mobile and systems programming (Swift, Kotlin, Rust) to broaden technical range beyond the web. Experienced in designing curriculum, lab exercises, and capstone projects from scratch, with strong ability to break down complex technical concepts clearly.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Java, C++
Frontend	Next.js 14, React 18, Redux Toolkit, Tailwind CSS, SCSS, Material UI
Backend & DB	Node.js, Express, Supabase (PostgreSQL), Firebase, REST APIs
AI / Real-time	OpenAI API (GPT-4, TTS, Whisper), LiveKit WebRTC, Web Audio API, Web Push
Tools	Git, GitHub, Vercel, Netlify, Docker, Figma, Jira

EXPERIENCE

Freelance Programming Tutor

Self-employed · Remote

Dec 2024 – Present

- Tutored university students in Java, Python, C++, and full-stack web development
- Prepared custom exercises and code-review sessions tailored to each student's level

Programming Instructor

Rikkei Academy · Vietnam (Remote)

Sep 2023 – Nov 2024

- Taught full-stack web development using JavaScript, React, and Node.js
- Designed course curriculum, lab exercises, and grading rubrics from scratch
- Guided students through end-to-end capstone projects: requirements → deployment
- Built demo apps and starter templates used as live teaching material in class

Frontend Developer Intern

Success Software Services · Vietnam

Jun – Sep 2023

- Built and maintained reusable UI components and feature pages in React, Next.js, and TypeScript, following the team's design system and coding conventions
- Integrated frontend features with backend REST APIs, handling state management, form validation, and error handling
- Participated in Agile ceremonies (sprint planning, standups, retros) and tracked tasks through Jira sprint boards
- Collaborated via Git branching workflows, submitted pull requests, and addressed feedback from code reviews to improve code quality
- Debugged and fixed UI issues reported by QA, improving component reliability across browsers and screen sizes

PROJECTS

Personal Productivity & IELTS Learning Platform

kenworkspace.netlify.app · GitHub

Jan 2026 – Present

- **Architecture:** Full-stack PWA (Next.js App Router, TypeScript, Tailwind CSS, Supabase/PostgreSQL). Session auth, i18n (EN/VI), PWA + service worker. Deployed on Vercel with Netlify fallback cron.
- **IELTS Suite:** Listening, Reading, Writing, and Speaking — Cambridge CAM 10–19 papers, timed audio, highlight tools, scoring, explanations, share/public result links, and IELTS vocabulary note sets with spaced-repetition practice.
- **AI Voice Tutor:** Real-time English conversation via OpenAI Realtime API + LiveKit WebRTC; 3D avatar lipsync (phoneme→viseme). Launches from news articles and Engoo lessons for read-and-discuss sessions.
- **Study Kit:** Upload documents → AI summaries, structured notes, and quizzes; session history and saved topic folders for review.

- **Daily English News:** Engoo Daily News, Guardian, HBR, and saved export history — in-app readers with per-word vocab, phonetics, karaoke audio, and EPUB/Kindle export.
- **Watch Together:** Create/join rooms to watch the same video online with synchronised playback and shared controls (co-watching).
- **YouTube Hub:** Channel feeds, playlists, live streams, saved videos, custom playlists, search, and a persistent cross-page mini player dock.
- **Meets (video/audio online):** LiveKit-powered rooms for live tutoring or conversation — join by link, recent rooms, in-call chat; call UI persists while navigating the app.
- **Chess:** Tactics puzzles, opening repertoire + drill, play online (room codes), game history, accuracy analysis, and stats.
- **Language & notes:** Dictionary (AI definitions), sentence translator, personal library + lookup history; rich-text Notes (folders, labels, sharing, PDF export); Diary with highlight→flashcard flow.
- **Productivity:** Timezone-aware calendar, shared study-schedule grid (people × time slots, CSV export), and Daily Tasks with templates, usage counters, and evening push reminders.
- **Push notifications:** VAPID Web Push + cron — vocab reminders, calendar alerts (15 min / 1 hr / 1 day), study-schedule nudges; deduplicated in Supabase.
- **Portfolio:** Landing, profile/CV sections, and contact — public without login.
