

SUMMARY

Software Engineering student seeking a Full Stack Developer Intern position. Experienced in building web applications with Java, Spring Boot, ReactJS, JSP/Servlet, RESTful APIs, and SQL databases through academic and personal projects. Familiar with the full software development lifecycle, from designing databases and developing backend APIs to building responsive user interfaces. Proactively leverage AI-powered development tools such as ChatGPT, Claude, GitHub Copilot, and Antigravity (Vibe Coding) to support coding, debugging, documentation, and problem-solving while independently reviewing and validating code quality. Eager to learn new technologies, continuously improve technical skills, and contribute to real-world software projects.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript (ES6+), SQL.
Backend: Spring Boot, Spring Security, Java Servlet/JSP, RESTful APIs.
Frontend: ReactJS, Redux Toolkit, HTML5, CSS3, Bootstrap, React Router.
Databases: MS SQL Server, PostgreSQL (Supabase).
AI-Assisted Development: ChatGPT, Claude, GitHub Copilot, Antigravity workflow (Vibe Coding), Agentic AI / AI Agents Workflow, Prompt Engineering.
Development Tools: Git, GitHub, Postman, Maven.
Languages: English (**IELTS 6.0 level** – Able to read technical documentation and communicate effectively in English).
Soft Skills: Analytical Problem-solving, Effective Communication, Teamwork, Adaptability.

PROJECT EXPERIENCE

Movie Management System

07/2026 - 08/2026

Personal Project

- **Description:** A web application for managing online movie catalogs, supporting search, classification, and UI theme switching.
- **Tech Stack:** ReactJS, Redux Toolkit, React Router, JavaScript (ES6+), CSS Variables, REST API.
- **Responsibilities & Achievements:**
 - Applied **Vibe Coding with Antigravity workflow** to quickly scaffold the project and generate UI boilerplate, cutting setup time by 35%.
 - Utilized **AI Agents** to review code logic and ensure the component architecture strictly follows MVC and SOLID principles.
 - Separated business logic into reusable custom controller hooks and managed global state using Redux Toolkit.
 - Implemented async CRUD functions with Async Thunks to handle loading and error states smoothly.
- **Github:**<https://github.com/txt2806/Movie-Managerment-System>

Early Disease Risk Detection System

06/2026 - 07/2026

Academic Project

- **Description:** An intelligent healthcare ecosystem that processes user biometrics to predict cardiovascular risks and provides an AI-powered medical assistant for doctors.
- **Tech Stack:** Java 17, Spring Boot 3.2, Spring Security 6, WebFlux (WebClient), PostgreSQL (Supabase), Python (FastAPI, Uvicorn), Scikit-learn, SHAP, Gemini API.
- **Responsibilities & Achievements:**
 - Preprocessed the UCI Heart Disease Dataset (920 patients) and **trained a tuned Random Forest model using Scikit-learn**, achieving a **predictive accuracy of 84.78%** and an **AUC score of 0.9255**.
 - Integrated the **SHAP (SHapley Additive exPlanations) library** to implement Explainable AI, visualising how clinical factors (e.g., heart rate, blood pressure, age) impact the model's diagnostic decisions.

TechStore – E-Commerce Website

03/2026 - 04/2026

- Developed a **Doctor Chatbot feature by integrating the Google Gemini API** into the FastAPI server to provide automated medical consultations and operational support.
- Built and exposed key production endpoints (/predict, /predict/trend, /chat/doctor) using FastAPI and Uvicorn, connecting them asynchronously to the Spring Boot backend via WebFlux WebClient to **improve response times by 30%**.
- Designed a secure hybrid authentication flow (Google Login/SMS OTP) using Spring Security 6 (RBAC) and Firebase Admin SDK over a secure Supabase DB.
- **Github:** <https://github.com/txt2806/Early-disease-risk>

Personal Project

- **Description:** An e-commerce website selling technology products with real-time search and smart checkout features.
- **Tech Stack:** Java 17 (Servlet 6.0), JSP, JSTL, MS SQL Server, Firebase SDK, Vanilla JS, AJAX, CSS3.
- **Responsibilities & Achievements:**
 - Developed backend services using Java Servlet and MS SQL Server following the MVC architecture.
 - Used **AI Agents** to generate SQL schema templates and write mock data for testing, saving 40% of standard setup time.
 - Coded an auto-suggest search box with client-side Debouncing, **which cut unnecessary database queries by 80%**.
 - Optimized checkout speed by using JDBC Batch Processing for bulk database inserts.
- **Github:** <https://github.com/txt2806/SaleWeb>

EDUCATION

2024 - 2027

Bachelor of Software Engineering

FPT University

- **Expected Graduation:** 2027
- **Core Courses:** Software Engineering, Database Systems, Web Application Development

CERTIFICATIONS

2026

- **HKUST (Coursera):** Software Design and Project Management | Modeling Software Systems using UML
- **University of Michigan (Coursera):** User Experience Research and Design | Web Design for Everybody
- **Amazon (Coursera):** Generative AI in Software Development

EXTRA-CURRICULAR ACTIVITIES

11/2025 - 12/2025

FPTU AI & Robotic Challenge

Technical Collaborator

Assisted the organizers in managing timeline, event logistics, and coordinating student teams during the competition.

06/2025 - 03/2026

FPT University

Orientation Guide Leader (OGL) & Event Collaborator

FPTU Camp 5: Guided and managed over 100 new students to integrate into the university environment; planned team-building activities to connect members.

FPTU Open Day: Welcomed high school students and parents, introduced school facilities, and supported event operations.
