EDUCATION

University of Engineering and Technology (UET – VNU)

Aug 2023 – Present

- Major: Information Technology (Japanese Market-Oriented).

TECHNICAL SKILLS

- **Languages:** Java, Kotlin, C/C++, JavaScript (TypeScript).
- **Backend:** Spring Boot (Learning), NestJS, REST APIs, JWT Authentication.
- **Frontend:** React.js, Next.js, Tailwind CSS.
- **Mobile:** Kotlin, Jetpack Compose.
- **Database:** MySQL, PostgreSQL, SQLite, Prisma ORM, Room.
- **Tools:** Git, GitHub, Postman, Jira, Agile (Scrum), Figma.
- **Languages:** English (Reading technical documentation), Japanese (JLPT N3 in progress).

PROJECTS

RMap — Developer Roadmap Learning Platform

Mar 2026 – Present

Github: github.com/nivx18818/rmap-app *Demo:* <https://rmap-app.vercel.app>

Open-source learning platform inspired by roadmap.sh that helps users explore developer roadmaps, generate personalized learning paths, track progress, and complete quizzes. Built with *Next.js*, *React*, *NestJS*, *TypeScript*, *PostgreSQL*, *Prisma ORM*, *JWT*, *Jest*.

- Implemented secure authentication APIs including register/login, bcrypt password hashing, JWT authentication, HttpOnly cookies, refresh-token rotation, authorization guards, and logout flow.
- Developed roadmap learning APIs including roadmap retrieval, learning progress tracking, quiz generation, quiz submission, and automatic score/pass calculation.
- Built onboarding and roadmap template features using Gemini-powered quiz generation, role-based roadmap recommendations, pagination, filtering, and roadmap management.
- Implemented dashboard APIs with activity tracking, longest learning streak calculation, UTC date handling, and comprehensive Jest unit tests.
- Collaborated using Git feature branches, pull requests, code reviews, and documented testing workflows.

RMap Mobile — Personalized Developer Roadmap App

May 2026 – Present

Github: github.com/mtuong1031/rmap-mobile

Android application for exploring developer roadmaps, tracking learning progress, bookmarking skills, and receiving learning reminders. Built with *Kotlin*, *Jetpack Compose*, *Material 3*, *Navigation Compose*, *Retrofit*, *OkHttp*, *Room*, *SharedPreferences*.

- Developed modern Android UI using Jetpack Compose with reusable components and feature-based architecture.
- Integrated RESTful APIs using Retrofit and OkHttp with interceptors, timeout configuration, centralized error handling, and environment-based API configuration.
- Implemented authentication and persistent session management using SharedPreferences and a custom OkHttp CookieJar.

- Built offline storage with Room Database for bookmarked roadmaps and skills, and implemented local notification reminders.

Ticket Rush — High-Concurrency Event Ticket Booking Platform *May 2026 – Jun 2026*

Github: github.com/nivx18818/ticket-rush

Open-source event ticket booking platform designed to handle high-concurrency seat reservations with real-time synchronization. Built with *NestJS*, *TypeScript*, *PostgreSQL*, *Prisma ORM*, *JWT*, *Socket.IO*, *Docker*, *Jest*.

- Implemented secure authentication and authorization using JWT, refresh-token rotation, role-based access control (RBAC), protected APIs, and user management.
- Developed event management features including event CRUD, publishing workflow, seat zone generation, seat management, and customer ticket APIs.
- Designed the complete ticket booking workflow with seat reservation, order confirmation, transaction handling, and database relationships to prevent inconsistent bookings.
- Implemented distributed seat locking, automatic lock expiration using scheduled Cron Jobs, and real-time seat availability updates via Socket.IO to prevent double booking under concurrent access.
- Collaborated in an Agile workflow using Git feature branches, pull requests, code reviews, unit testing, and Docker-based development environment.

Back Market — E-commerce Marketplace Platform *July 2025 – October 2025*

Github: github.com/mrthinh307/back-market

Open-source e-commerce marketplace inspired by Back Market, featuring product browsing, shopping cart, and responsive user interface. Built with *Next.js*, *React*, *TypeScript*, *Tailwind CSS*, *Shadcn/UI*, *Git*.

- Developed responsive product detail pages with product information, ratings, bundles, recommendations, and purchasing options.
- Built shopping cart features including product cards, recommended products, and cart perks using reusable React components.
- Refactored shared layouts and UI components to improve responsiveness, maintainability, and user experience.
- Collaborated in an Agile workflow using Git feature branches, pull requests, code reviews, and reusable component-based development.

BookWorm — Library Management System *Sep 2024 – Dec 2024*

Github: github.com/nivx18818/library-management-app

Java desktop application for managing books, members, and borrowing transactions with authentication and Google Books integration. Built with *Java*, *JavaFX*, *SQLite* following the MVC architecture. Course project (OOP), graded **30/30**.

- Implemented DAO, service, and controller layers for books, users, administrators, and borrowing transactions.
- Developed borrowing and returning workflows including loan management, inventory updates, and transaction history.
- Integrated Google Books API to automatically retrieve book metadata, reducing manual data entry.
- Improved data consistency by refactoring loan management, password handling, database schema, and returned-book workflows.
