Objective

Frontend Developer with hands-on experience building production-grade React applications, managing complex state, and delivering responsive UI/UX. Seeking a Frontend role where I can contribute to high-quality digital products and grow alongside an experienced engineering team.

Technical Skills

Languages: TypeScript, JavaScript, Python

Frontend: React, Vite, Next.js, Tailwind CSS, Bootstrap, shadcn/ui, MUI, Framer Motion

State & API: TanStack Query, Redux Toolkit, REST APIs, WebSocket / StompJS

UI & Data Visualization: Responsive Design, Component-based UI, Mapbox GL JS, amCharts, Figma

Auth & Security: JWT Authentication, OAuth 2.0 / OIDC, Token Refresh, Protected Routes

Testing & QA: Katalon Studio, Selenium, Chrome DevTools

Tools: Git, Docker, Postman

Experience

TMA Solutions

June 2025 – Dec 2025

Software Development Intern

- Developed a React + TypeScript monitoring dashboard with deep-customized shadcn/ui components to track crawler status and manage data flows in real time.
- Integrated interactive Mapbox GL JS maps and amCharts visualizations for real-estate market density analysis and trend reporting.
- Engineered large-scale automated crawlers for ITVIEC, LinkedIn, and real-estate platforms using Crawl4AI, Scrapy, and Selenium – handling complex login flows, session/cookie management, and CAPTCHA measures.
- Improved scraping throughput ~30% via request batching and browser session reuse; automated HTML parsing with Gemini AI API, significantly reducing manual data-processing effort.

Projects

Travello – Smart Travel Platform

Dec 2025 – June 2026

Description: A self-guided travel application designed to help users plan trips and explore destinations efficiently.

Role: Frontend Developer (2-member team, solely responsible for entire Frontend) **Stack:** React, Vite, TypeScript, TanStack Query, Redux Toolkit, Tailwind CSS, shadcn/ui, WebSockets, OAuth 2.0, Docker, Nginx

- Architected and built the entire frontend independently using React + Vite, implementing routing, reusable component systems, and responsive layouts from scratch.
- Orchestrated complex state management with TanStack Query + Redux Toolkit for high-performance data fetching, caching, and optimistic UI updates.
- Implemented real-time messaging and push notifications via WebSockets (StompJS) for instant user-to-provider communication.
- Designed AI-powered itinerary generation UI with shadcn/ui and Framer Motion, ensuring a responsive and consistent experience across all devices.
- Deployed on Microsoft Azure VM using Docker multi-stage build and Nginx reverse proxy with HTTPS, reducing Docker image size from ~550MB to ~30MB.

GitHub: github.com/viLam11/Travel **Live Demo:** travello.thinhletr.dev

Agricultural Environment Monitoring & Control System

Feb 2025 – May 2025

Description: A smart agricultural IoT system designed to monitor and regulate environmental conditions via a web application.

Role: Frontend Developer (Group Project – 5 members) **Stack:** React, MUI, JWT, Day.js, RESTful API, Figma

- Implemented secure JWT authentication with automated token refresh for seamless API communication.
- Built low-latency sensor dashboards displaying real-time temperature and humidity data from IoT devices.
- Developed task scheduling features using MUI Date Pickers and Day.js, enabling users to automate device management.

Education

Ho Chi Minh City University of Technology (VNU-HCM)

2022 – 2026

Bachelor of Computer Science (GPA: 3.1/4.0)

Ho Chi Minh City

- English: TOEIC 615 (2024); BK English Speaking & Writing 265/400 (2025).
- Excellent Volunteer Award – Green Summer Campaign (2024).
