

Summary

Computer Science student with a Data Science concentration, focusing on applied AI and AI-powered product development. Experienced in building end-to-end AI projects, including a Vietnamese RAG chatbot and a computer vision web prototype for plant disease classification. Comfortable working with Python, machine learning workflows, LLM-based applications, Streamlit prototypes, SQL, Git, and GitHub. Interested in turning AI ideas into usable demos with clear user flows, fast iteration, and practical product value in a startup environment.

Education

Posts and Telecommunications Institute of Technology (PTIT) Hanoi, Vietnam
Bachelor of Engineering in Computer Science Data Science Concentration 2023 - 2027(Expected)
Pursuing a Bachelor of Engineering in Computer Science with a concentration in Data Science, building a strong academic foundation in data analysis, statistical modeling, and machine learning. Gained practical experience through coursework and academic projects focused on applying data-driven methods to solve technical problems. Cumulative GPA: 3.54/4.0 (as of the 6th semester)

Skills

Python	Applied for Data Science and Machine Learning, using libraries such as PyTorch, Pandas, NumPy, and Scikit-learn for model development, data analysis, and experimentation.
SQL	Used for querying, managing, and analyzing relational databases, with experience in writing queries, filtering data, joining tables, and extracting useful insights from structured datasets.
Java	Applied Object-Oriented Programming principles to design and implement basic software components, data structures, and academic programming projects.
Aptis B2	Proficient in reading technical documentation

Experience

NeoRAG [NeoRAG](#) Solo project | Aug 2025

- Built a Vietnamese retrieval-augmented chatbot that helps students ask questions about PROPTIT club using internal documents and FAQ-style data.
- Integrated an LLM-based response generation module to provide grounded answers in Vietnamese.
- Developed a simple web interface for students to ask questions and receive instant responses.
- Planned evaluation using manual relevance checking and answer-grounding analysis.

PlantDocAI [PlantDocAI](#) Solo project | may 2026

- Developed an end-to-end deep learning project for classifying plant leaf diseases from images, including dataset preparation, training, evaluation, and inference.
- Experimented with pretrained CNN models such as MobileNetV2 and EfficientNet to compare transfer learning performance.
- Applied WeightedRandomSampler and image augmentations with Albumentations to handle class imbalance and improve generalization.
- Added Grad-CAM visualization to help inspect model attention regions during prediction.

Activities

PTIT PROGRAMMING CLUB (PROPTIT)

Hanoi, Vietnam

Deputy Head of External Relations

2023 - 2026

Participated in an AI project team, contributing to data preparation, model experimentation, and result analysis for academic ML prototypes.

Interests

Career Interests:

Applied AI, production-ready ML systems, computer vision, RAG applications, competitive programming.
