SUMMARY

As a Fullstack-oriented Software Engineer, I aim to strengthen my expertise in building high-performance web systems with a strong focus on scalability and user experience optimization. In the short term, I am focused on advancing my technical skills in backend development, as well as frontend development. In the long term, I aspire to become a software engineer capable of designing scalable system architectures and leading technical initiatives.

SKILLS

Language:	Javascript, Typescript, Html, Css, SQL, C++
Frontend	Reactjs, Nextjs, Antdesgin, Tailwindcss, Html, Css
Backend	Nodejs, Expressjs, Nestjs
Database	PostgreSQL, MongoDB
Others	Docker, CI/CD với Github Action, Aws (EC2, Lambda, DynamicDB,...), Redis, GeminiAPI

EXPERIENCES

Bac Ha Software Co., Ltd. Hanoi	08/2025 - 02/2026
Nodejs Intern	
- Contributed to the development of two real-world projects using ReactJS, Angular, ExpressJS, and MongoDB. - Analyzed and optimized a complex API endpoint, improving processing performance by 200–300%. - Built responsive user interfaces based on Figma designs, ensuring compatibility across multiple devices. - Developed RESTful APIs and integrated real-time notifications using WebSocket technology. - Utilized GraphQL to enable flexible and efficient client-side data querying. - Participated in technical documentation analysis, business requirements analysis, and feature implementation following code review workflows.	

LAB EDUCATION INVESTMENT JOINT STOCK COMPANY Hanoi	06/2025 - Now
Operation and development website - Fullstack	
- Developed system features using ReactJS and Golang. - Optimized the system to handle over 10,000 concurrent visits during peak traffic periods. - Leveraged AI-assisted development tools to accelerate development workflows while ensuring code quality and testing reliability. - Designed and maintained CI/CD pipelines using Docker and GitHub Actions to automate testing, build, and deployment workflows.	

ACTIVITIES

Informatics Club — University of Transport and Communications (SFIT)	05-2025 - Now
Vice President	
- Managed and coordinated the club’s technical activities for a community of approximately 200 members. - Organized workshops on Web Development, Git, Backend fundamentals, and academic competitions such as OLP and AI-related contests. - Supported members in learning and building real-world projects, while teaching supplementary technical classes. - Contributed to the development of internal systems (web/app platforms) for the club. - Mentored new members in Data Structures & Algorithms (DSA) and Fullstack Development.	

EDUCATIONS

University of transport and communications (UTC)	2023 - 2027
Final-year student - Information of Technology - GPA: 3.4	
Achieved A+ grades in several core computer science courses, including Data Structures & Algorithms and Object-Oriented Programming. Participated in and received awards in academic and programming competitions such as ICPC, Informatics Olympiads, and Hackathons. Actively organized technical workshops and academic activities within the club while contributing to the development of real-world web projects.	

PERSONAL PROJECTS

Online Judge & Competitive Programming Platform (Inspired by Codeforces and DMOJ)	05/2024 - 10/2024
Solo Fullstack - Source: https://github.com/zunohoang/neptune-oj	
- Developed a responsive and user-friendly interface using React.js, ensuring compatibility across multiple devices. - Implemented WebSocket technology to provide real-time judging status updates for users. - Utilized Redis to reduce load on the PostgreSQL database, with plans for further performance optimization in future iterations. - Built RESTful APIs using Java Spring Boot to manage and display problems, submissions, and contests, with JWT-based authentication - Deployed Docker-based sandbox environments to isolate the judging system, ensuring security and stability for the main web server.	
Smart Agriculture IoT System	11/2024 - 6/2025
Leader (Team Size: 3) - Source: https://github.com/FarmingBoard	
- Built a Smart Farming system for collecting and monitoring environmental data such as humidity, temperature, and light intensity from IoT devices. - Utilized ThingsBoard as the IoT platform for device management and telemetry processing. - Developed real-time dashboards and mobile applications to monitor and manage farm conditions efficiently. - Designed sensor data processing pipelines and MQTT-based communication systems to ensure continuous real-time data transmission. - Implemented automated device control features based on configurable thresholds and automation rules. - Established essential IoT system workflows, covering product deployment, user delivery, and post-deployment maintenance processes.	
Club Introduction & Management Website (SFIT CLUB)	08/2025 - 10/2025
Leader (Team Size: 5) - Demo: hello.sfit.com.vn , sfit.com.vn , study.sfit.com.vn	
- Built a management system with role-based access control (RBAC) for instructors and members. - Integrated a Markdown-based learning material system, enabling flexible and dynamic content rendering. - Established CI/CD pipelines using Docker and GitHub Actions to build, and deployment processes. - Technologies used: Next.js, TailwindCSS, MongoDB, React.js, NestJS.	

HONORS & AWARDS

Participated in the National Round of the International Collegiate Programming Contest (ICPC).	2024
Awarded Third Prize in the Ha Tinh Provincial Excellent Student Competition in Informatics.	2022
1 Outstanding Award and 2 First Prizes in university-level student research competitions.	2025
Second Prize (2024) and Creativity Award (2025) at the Cardano Blockchain Hackathon.	2024
Top 27 Swin Hackathon 2024	2024
Received multiple awards in university-level Informatics Olympiad competitions during 2023–2025.	2023-2024-2025
Achieved several awards and recognitions in youth union and student association activities, including outstanding faculty-level achievements.	2023-2024-2025
