OBJECTIVE

A passionate and detail-oriented Software Engineer focusing on Backend Development. Proficient in building secure and efficient web applications using the Java Spring ecosystem, with strong Computer Science fundamentals. Seeking a challenging role to optimize backend architectures, solve complex problems, and drive impactful technical solutions for the team.

SKILLS

Core Languages	Java, JavaScript / TypeScript
Frameworks & Libraries	Spring Boot, Spring Security, Spring Data JPA
Databases & Caching	MySQL, SQL Server, Elasticsearch, Redis
Architecture	RESTful API Design, Data Structures, Algorithms, OOP, JWT, OAuth2, RBAC
Tools & DevOps	Git, GitHub, IntelliJ IDEA, Postman, VS Code, Docker, GitHub Actions
Methodologies	Agile / Scrum, Gitflow, Problem Solving, Teamwork
AI-Assisted Development	Cursor, GitHub Copilot, Codex

WORK EXPERIENCE

Tuong Minh Software Solutions Co., Ltd. (TMA Solutions) Ho Chi Minh City, Vietnam
Java Developer Intern November 2025 – March 2026

SkillMatrix — Employee Skill & Team Management Platform Backend Developer, Team of 6

An platform for tracking employee skills and team composition, helping managers staff the right people onto the right projects.

- Developed CRUD APIs for User, Team, Skill, and Career modules using Spring Boot and Spring Data JPA.
- Implemented JWT-based authentication for login/logout flows, table-less RBAC model to authorize endpoints.
- Wrote unit and mock tests covering core business logic; worked with BAs each sprint to finalize feature scope.
- Used Cursor and GitHub Copilot to accelerate boilerplate code and speed up development within sprint deadlines.
- Followed Agile/Scrum, with all code reviewed by a Senior Developer via GitHub PRs before merging to master.

Figen — AI-powered UI Generation Platform Backend Developer, Team of 8

A web platform that generates UI designs from natural-language descriptions, similar to tools like v0.

- Designed the base database schema and built core User Management features for the platform.
- Implemented email/phone registration with OTP verification and a password recovery flow.
- Authored API documentation detailing request/response contracts to support FE integration.
- Leveraged AI coding assistants (Cursor, GitHub Copilot) to speed up repetitive implementation tasks.
- Coordinated with FE developers on API contracts within a larger Agile/Scrum team, submitting PRs for Senior review.

PROJECTS

BookVerse — Full-stack E-commerce Bookstore Personal Project

A bookstore platform with customer storefront, admin dashboard, checkout, orders, payment, search, and AI book assistant.

- Designed a modular RESTful API architecture (Spring Boot, Spring Data JPA, MySQL) for core e-commerce modules.
- Secured endpoints with JWT-based authentication and claims-embedded, permission-based RBAC authorization.
- Integrated VNPAY with signed URLs and IPN verification for idempotent, tamper-proof payment processing.
- Powered product search with Elasticsearch and QueryDSL, backed by Redis caching to cut database load.
- Implemented a streaming RAG chatbot (LangChain4j, Gemini, SSE) with hybrid BM25/vector retrieval.
- Containerized the application with Docker and set up CI pipelines via GitHub Actions for automated builds.

Tech: Spring Boot, QueryDSL, MySQL, Redis, Elasticsearch, VNPAY, Gemini LLMs, React, TypeScript, Redux, TailwindCSS.

JobHunter — Job Seeking Platform API

Personal Project

A backend system for a job portal, manage job listings, company profiles, and user accounts.

- Structured a RESTful API layer (Spring Boot, MySQL) to manage users, job postings, and company profiles.
- Enforced role-based access control to restrict feature access by user type.
- Developed an email notification service that alerts users when employers post jobs matching their registered skills.
- Developed a frontend interface with React, TypeScript, Redux, and TailwindCSS.

Tech: Spring Boot, Java Mail, MySQL, REST APIs, React, TypeScript, Redux, TailwindCSS.

GitHub: FE: github.com/pltphong12/JobHunter_FE *BE:* github.com/pltphong12/JobHunter_BE

EDUCATION

Academy of Cryptography Techniques, Ho Chi Minh City, Vietnam

2022 - 2026

Bachelor of Science in Software Engineering

GPA: 3.2 / 4.0

CERTIFICATIONS

TOEIC (Listening & Reading) — 690/990, Level B2

2025
