Dear SlimAI Hiring Team,

My name is Tran Hoang Ha, a final-year Information Technology student at VNUHCM – University of Science, graduating July 2026. I'm writing to apply for the AI Developer Intern position at SlimAI.

What draws me to this role is the focus on using AI to build products with real users, not just writing code. I've worked on an English-learning app integrating OpenAI's API — including a conversational chat feature, translation, text-to-speech, and a context-aware chat that feeds the last 20 messages back to the model to generate both an answer and follow-up question suggestions. I've also built a full-stack e-commerce application (React, Node.js, PostgreSQL) with relational schema design and complete RESTful APIs. These are available on GitHub, which I'd be happy to share.

I don't have direct experience with Chrome Extensions or automation tools yet, but with my JavaScript/Node.js foundation, I'm confident I can pick this up quickly, and I'm genuinely interested in exploring that space.

Using AI to support development is part of my daily workflow — for research, debugging, and learning new technologies — and I also understand how to integrate AI models into an actual product, not just use them as a Q&A tool.

I currently work as a Web Development Instructor at MindX Technology School, which has sharpened my sense of user experience, communication, and responsibility. I'm available to work flexible part-time hours as required.

I'd welcome the opportunity to discuss further and contribute to SlimAI.

Thank you for taking the time to read this letter.

Sincerely,  
Tran Hoang Ha

## EXECUTIVE SUMMARY

Aspiring Software Developer with a long-term goal of becoming a Solution Architect, focused on understanding system workflows and designing scalable, efficient solutions. Fast learner with a strong willingness to improve, and familiar with using AI tools, AgentAI at a basic level.

## EDUCATION

VNUHCM - University of Science  
Bachelor's degree, Information Technology  
GPA: 3.5/4.0, Expected Graduation: July 2026

HCMUAF - Nong Lam University  
Engineer's degree, Automotive Technology  
GPA: 3.19/4.0, Graduated: November 2023

## SKILLS

|                     |                                             |
|---------------------|---------------------------------------------|
| Languages           | : C/C++, JavaScript, Python, C#             |
| Frameworks          | : Bootstrap, ReactJS, NodeJS, .Net          |
| Design Patterns     | : OOP, DSA, SOLID, Clean Architecture       |
| Project Management  | : Git, GitHub                               |
| Database Management | : MySQL, SQLServer, PostgreSQL, SQL         |
| Others              | : HTML, JS, CSS, RESTfulAPIs, Sequelize ORM |

## WORK EXPERIENCE

Lecturer at MindX Technology School July 2024 – Present

- Guided a class of 6-10 students with grade-based curricula:
  - Grades 6–8 : Game logic, physics, Finite State Machine
  - Grades 7–9 : Python, OOP, Qt Designer
  - Grades 9–12 : HTML, CSS, JavaScript, Firebase, role-based access control, admin dashboard, CRUD e-commerce pages, Cloudinary integration
  - Grades 11–12 : OOP, Data Structures and Algorithms, data analysis, linear models
- Consistently achieved a 94.76% efficiency rating in student level-up progress, leading to regular performance-based promotions and salary increases.
- Honored as the "Most Favorite Instructor" at the branch, voted by students, parents, and colleagues for excellence in teaching and technical mentorship.

## PROJECTS

Full-stack E-commerce Application - [Link Github](#) [Link Deploy](#) June 2025 - Dec 2025

- Built a full-stack e-commerce application using React, Node.js (Express), and PostgreSQL (Sequelize), with a normalized relational schema covering products, categories, tags, reviews, orders, and payments
- Developed RESTful product APIs with advanced filtering (search, category, tag, price range), multi-field sorting, and pagination; used Sequelize eager loading to serve full product detail (images, reviews, category, tags) in a single query
- Implemented JWT-based authentication with bcrypt password hashing, role-based access control (User/Admin), and token blacklisting to properly invalidate sessions on logout

AI-powered English Learning Web Application - [Link Github](#) Sep 2025 - Dec 2025

- Built a full-stack English learning app using React and Node.js (Express, MySQL), integrating OpenAI APIs for conversational chat (gpt-3.5-turbo), translation, and text-to-speech (gpt-4o-mini-tts)
- Designed a context-aware chat feature that feeds the last 20 messages back to the model and prompts it to return both an answer and 3 follow-up question suggestions in structured JSON
- Implemented JWT authentication with token blacklisting, persistent chat history, a vocabulary bookmarking feature, and browser-based speech recognition for hands-free voice interaction

Multi-page Static Website - [Link Github](#) [Link Deploy](#) Feb 2025 - May 2025

- Built a dynamic website using HTML, CSS, JavaScript, and HandlebarsJS
- Implemented core pages and features including content search and category filtering, with reusable templates and a modular frontend architecture
