SUMMARY

Passionate and detail-oriented back-end engineer intern eager to apply my skills in Java, Spring Boot, MySQL, and Docker. Skilled in API development, system architecture, and performance optimization. Enthusiastic about building efficient server-side systems and always ready to learn new technologies. Currently seeking an internship to apply my skills, contribute to innovative projects, and grow in a collaborative environment.

SKILLS

- **Backend & Security:** Java core, Spring Boot, Spring Cloud, Spring Security, Data JPA, Hibernate, JWT/OAuth2, Microservices, RESTful APIs, MVC, Service Discovery.
- **Tools & Testing:** Postman, Swagger, junit.
- **Database:** MySQL, Firebase, SQL server, Redis.
- **DevOps & Cloud:** Docker, AWS, GitHub Actions, Git(basic).

EDUCATION

The University of NongLam

- Information technology engineer

PERSONAL PROJECTS

Web-Ecommerce (TeamSize: 1)

- **Description:** A robust e-commerce platform for electronics, designed on a Microservices architecture, featuring an AI chatbot and a machine learning-based product recommendation system.
- **Technologies Used:** Spring Boot, Spring Cloud (Gateway, Eureka, Config Server), Spring Security, JWT, OAuth2, React, TypeScript, Material-UI (MUI), Vite, MySQL, GHN API, VNPay, Google Gemini API, Python (FastAPI), Scikit-learn, Docker.
- **Responsibilities:**
 - **Backend & Architecture:** Designed a highly scalable Microservices system with 16 services, leveraging Spring Cloud (Gateway, Eureka, Config Server) to achieve loose coupling, high availability, and independent service deployment.
 - **Frontend Development:** Developed a responsive and dynamic user interface along with an Admin Dashboard using React, TypeScript, and Material-UI.
 - **AI Integration:** Created a context-aware AI chatbot (Gemini API) and a product recommendation engine using machine learning (Python/Scikit-learn).
 - **Security & 3rd-Party APIs:** Ensured user authentication and data privacy through the implementation of OAuth2/JWT stateless security, while successfully integrating third-party APIs such as VNPay, Stripe, and GHN for smooth payment and logistics processing.
 - **System Optimization:** Improved system performance by incorporating Redis caching for frequently accessed product catalogs, resulting in over a 60% reduction in API response time during peak local testing.
