SUMMARY

Full-stack web developer experienced in TypeScript, NestJS, and Angular. Shipped a production clinical genomics platform on AWS EC2 with CI/CD, real-time payments, and subscription management. Built a real-time chat web application end-to-end with WebSocket, JWT auth, and S3 integration. Comfortable across the stack — from database schema design to responsive UI.

EDUCATION

Thang Long University Ha Noi, Viet Nam

Bachelor of Science in Information Technology 2022 – 2026 | GPA: 8.8/10

Academic Excellence Scholarship recipient (Year 4)

Relevant coursework: OOP, Data Structures and Algorithms, Web Programming, Databases

SKILLS & CERTIFICATIONS

- **Languages:** TypeScript, JavaScript, Node.js, HTML, CSS
- **Frameworks:** NestJS, Angular 17
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **DevOps & Cloud:** Docker, Docker Compose, GitHub Actions CI/CD, AWS S3, AWS EC2, Nginx
- **Real-time:** Socket.IO, WebSocket, Server-Sent Events (SSE)
- **Auth:** JWT (access + refresh token), Passport.js
- **APIs:** REST, Swagger/OpenAPI
- **Payment:** PayOS (Vietnamese gateway)
- **Tools:** Git, Postman, TypeORM, Mongoose
- **Certifications:** IELTS 7.0 (April 2024), TOEIC 850 (June 2026)

PROJECTS

GeneticsApp — Clinical Genomics Web Platform

Team project (Thesis) | July 2024 – April 2026 | GitHub: [Frontend](#) / [Backend](#)

Tech: NestJS · Angular 17 · MySQL · MongoDB · Redis · Docker · AWS S3/EC2 · s3fs · GitHub Actions · Nginx · PayOS · OpenAI

- Deployed and maintained production infrastructure on AWS EC2 with s3fs-mounted S3 buckets for persistent file storage, serving active users on a custom domain
- Built end-to-end payment & subscription system with PayOS gateway — migrated status updates from polling to SSE, reducing server load
- Developed usage quota enforcement with cron-based tracking, auto-renewal, and custom NestJS guard/decorator pattern to gate features by subscription tier
- Designed GitHub Actions CI/CD pipeline — automated builds, Docker image push, and zero-downtime deployment to EC2 with Nginx reverse proxy
- Implemented Redis caching across 10 service modules, reducing redundant database queries
- Added MongoDB collection indexes, improving variant query performance
- Built clinical PDF report generator using docxtemplater for variant summary reports

ChatApp — Real-Time Chat Web Application

Solo project | March 2026 – Present | GitHub: [Frontend](#) / [Backend](#)

Tech: NestJS · Angular 17 · PostgreSQL · Redis · Socket.IO · AWS S3 · Docker · TypeORM · Swagger

- Built a full-stack real-time chat web application supporting DMs and group chats with modular NestJS architecture (8 modules)
- Implemented JWT auth with access/refresh token rotation, email verification, and account recovery flow
- Built Socket.IO WebSocket gateway for real-time messaging, typing indicators, and online/offline presence tracking
- Engineered cursor-based message pagination for efficient loading of large conversation histories without offset performance degradation
- Integrated AWS S3 presigned URL uploads with validation, and optimized batch queries for room members and message history
- Implemented optimistic UI updates in Angular 17 (Signals + OnPush) for instant feedback with automatic rollback on error
- Containerized with Docker Compose (PostgreSQL 16-alpine, Redis 7-alpine) with health checks and persistent volumes

INTERESTS

Watching movies, playing sports — especially football — and walking.
